The XE Atari s new games machine

Support new machine, software houses urged

Bob Gleadow He made all the difference – said Jack Tramiel

BRITISH software houses have a great opportunity to make money worldwide if they weigh in with support for the new games machine, Atari boss Jack Tramiel is asserting

He told journalists and dealers at the recent Atari Computer Show that he had just raised $75 million of long-term backing in Europe

This meant finances were in order and the product range was right "We are ready to go , he said

We need your support but on the other hand we are spending $10 million promoting Atari in the US this year We hope you software people will find a home there if you try we will support you with everything we can

' If we all work together we are going to make it big

With $200 million in the bank and "all petrol tanks full ' Atari was ready to take on the world he boasted

Everything is being plugged in we are going to be a major force

The Atari chairman said he could smell success in the air in Britain now that Bob Gleadow was in charge "He has made all the difference"

Until Gleadow s arrival Atari UK was losing money This year it was expected to break even and next move into profitability

Gleadow revealed he would expect to turn over £30 million this year The least he could expect next year was £50 million he said

Big sales expected

HIGH on the list of new hardware at the Atari Computer Show was the new games machine console

Still without a firm release date, the cartridge-based machine will cost £89 95

It will be expandable to run all existing Atari 8 bit software on cassette The joystick data recorder and light gun come with a keyboard for about £40 This produces a full 64k computer system for £129 95

Atari chairman Jack Tramiel said at the launch that more than 400 pieces of software were available for the machine even before it was launched

Because of the promotional effort Atari was putting into the machine around the world – particularly in the US – it was going to be a big seller he promised

8 BIT CHESS ARRIVES

COLOSSUS 4 Chess has been released for the Atari 8 bit

CDS Software (0302 21134) says this is the first 3D chess game for the machine and claims it is the strongest program of its kind

It features a backtrack facility problem solving mode and handicapping

The 8 bit version requires 48k of ram and costs £9 95 on cassette and £14 95 on disc

Earnings soar

ATARI Corporation earned more than four times as much in the first quarter of this year as it did in the same period last year

Income was $9 3 million compared with $1 8 million in the first three months of 1986 – a 412 per cent rise

Worldwide sales in the quarter were nearly double these for the period in 1986

Cash registers rang up a total of $85 1 million compared with $44 8 million last year – an increase of 45 per cent

During the period Atari opened new sales offices in Spain and Sweden and appointed a new general manager to concentrate on improving US sales

Atari has completed a $75 million Euro dollar bond issue The company says the proceeds will be used to expand its business through capital expenditures and acquisitions in the computer field and related areas and for general corporate purposes

New mission for Floyd

AT last there is a sequel to Planetfall featuring one of interactive fiction s favourite characters Floyd the lovable robot American publisher Infocom has released the Atari XL/XE version of Stationfall in which you are enlisted in the Stellar Patrol and sent on a mission with the playful Floyd

Toast of the show

SOFTWARE houses showed their commitment to cartridge games for the new 8 bit machines at the show

The public responded too They crowded into the Novotel on the Friday to make it the best first day ever, 1 000 up on previous opening sessions

So many people had wanted to exhibit that organisers Database had booked more space The 70 or so exhibitors reported an excellent response from an informed public

Software publishers gave a universal thumbs up to the new games machine pledging lots of support for it and a staggering variety of new software was unveiled with every sort of utility and game on offer

DEDICATED ? So are we!

Don't get confused. PAGE 6 is a totally independent magaeine for Atari users that will compliment and expand your Atari world.

Revolt against games image

SCIENCE teacher Glenn Leader is so fed up with people saying Atari micros are only for games that he has started a counter movement

He is recruiting like minded Atari users for a new special interests group called Sigatari

"The group was set up to combat what many people consider Atari computers to be – that is, purely games machines", he told *Atari User*

"I believe you don't have to shoot blobs to have fun There is music, robotics, programming, control technology, interfacing techniques and much much more available with Atari

"One of our aims is eventually to adopt a language – Forth perhaps – bearing in mind the limitations of Basic and the difficulty of learning machine code

"We are also developing a contact service for members with similar interests, a Help line for Atari related problems, and a bulletin board"

No war casulties

FEARS that the US-Japan trade war would affect Atari's UK operation have been dispelled by British boss Bob Gleadow

Because Japanese computers now cost twice as much in the US following the introduction of tariffs, it was suggested that Atari might flood the market there and hold back on manufacturing for Europe But Gleadow explained that Atari manufacturing was operated separately for each side of the Atlantic

"I can say that the present trade relationship between the US and Japan will not affect UK availability and pricing", he said

HERO FLASH FLIES IN

SPACE crusader Flash Gordon is off on another mission to save the world this time courtesy of the Atari 8 bit series

In Mastertronic's latest release the evil Ming has targeted Earth with planet killer missiles To stop him destroying life as we know it you take the part of superhero Flash and foil the plot

Ming must die if the Earth is to live – he carries the missile controls with him and only by destroying them can you hope to succeed Unfortunately your spaceship has crashed into the jungle on Ming's world and you only have 24 hours left

Flash Gordon costs £2.99 from Mastertronic (01-377 6880)

CREATIVE DEAL

CREATIVE Sparks Distribution has just signed a major deal with Atari – because it believes the company now knows what it's doing

Vince Holton CSD marketing manager said "We firmly believe that 1987 will be Atari's year

"It is evident that both consumers and dealers are becoming excited about the variety of Atari products"

The deal, says Holton is part of Atari's attempt to improve on its distribution

He said CSD talked to Commodore as well, but in the end they persevered with Atari because 'the pricing was more attractive and the company had its act together better'

Speed up Dos

A superb Dos utility for 64k XL/XEs from SIMON ROBINS.

WAITING for the Dos menu to load can get very frustrating after hours of typing. So why not keep the two Dos files in memory at the same time? A complete waste of space I hear you all cry. But not if you find an area of memory that the Atari doesn't normally let you use.

This program uses the unused area of memory under the operating system to hold the DUP.SYS file and allows the file to load at machine code speed – a great improvement on the old method. The area of memory is also used to save the program space that the DUP.SYS file will sit in when loaded.

In other words it will act as a MEM.SAV file, leaving your programs intact. Let me explain how to change your old tortoise Dos into a high speed hare.

Type in the listing, save it and type RUN. The program will take about 10 seconds to run. It will then load Dos and select option H to write Dos files for you. To be on the safe side insert a blank formatted disc. Press Return and follow the prompts to copy the system files on to this disc. You now have a new master disc which can be used to update any other Dos disc.

To check that all is well, turn off the computer and reboot using the new disc. Return to Basic and type DOS again. This time – and subsequently – the Dos should come up almost instantly. If at any stage things do not proceed as described, recheck the program and try again.

This modified Dos can be used with Basic, assembler or any application program that normally uses Dos 2.5.

5 LINERS

FLASHING CURSOR
from BRUCE BLACK

ATARI computers possess many powerful features but lack certain cosmetic effects such as a flashing cursor This can make all the difference to a screen display and many routines have been published over the years to provide this obviously useful feature

Unfortunately they usually have these major drawbacks in that all inverse text on the screen flashes in time with the cursor and the routine has to be re initialised with a USR call every time the system reset button is pressed

If you only want the cursor to flash and have it stay flashing even after pressing the reset button this program – CFLASH – is just what you have been waiting for it consists of three short machine code routines which are copied into page 6 and initialised started by a USR call

The routine sets the VBLANK interrupt vector to point to the CFLASH interrupt service routine Once this has been done the CFLASH will continue to run even after the reset button has been pressed

When an Atari does a warm start after the reset button is pressed it resets the interrupt vectors to default values and removes the CFLASH vector

Fortunately it is possible to trap the warm start routine since during its execution the operating system examines the contents of the boot success flag (BOOT?) at location $9

If the value is 1 a disc boot was successful and the operating system will jump to the address held in locations $C and $D (DOSINI) By reseting the DOSINI vector to point to the reset routine within CFLASH it is possible to reset the VBLANK vector whenever reset is pressed

CFLASH also allows cassette users to have this reset protection since it fools the operating system into thinking a disc boot was successful and so calling CFLASH s reset routine

The cursor flashing is accomplished during the VBLANK interrupt service routine Each time a VBLANK interrupt occurs it decrements a count When the count reaches 0 the count is reset and the routine proceeds to flash the cursor

CFLASH makes use of the value of the character under the cursor held in location $5D (OLDCHR) and the memory location of the cursor which is held in locations $5E and $5F (OLDADR)

The flashing is produced by toggling the top bit (bit 7) of the location pointed at by OLDADR This has the effect of changing the state of the character so that if it was normal it is now inverse and vice versa

A check is made to make sure that the VBLANK interrupt did not occur during a cursor move otherwise a character may be reversed before the operating system has saved the correct value of the character under the cursor

The check is carried out by comparing the value in OLDCHR with the value pointed at by OLDADR If they are not the same the cursor flash is aborted and the routine begins counting down again

The flashing period may be altered while the routine is running by the command "POKE 1607 period" where period is a value between 0 and 255 The smaller the value of period the faster the flashing effect except that a value of 0 produces the slowest flashing rate

```

Win £25

IF you've written any useful or interesting five line programs why not send them to us to grace our pages?

You should give a full description of the routine and any other details that are relevant

If you want your material returning please enclose a suitably stamped package We pay £25 for each one published

Simply send a copy of the program on disc or tape together with the documentation – preferably as a word processed file – to

Atari User, Europa House 68 Chester Road,
Hazel Grove, Stockport,
SK7 5NY

SPACE INVADERS
from RICHARD PARKES

WHO said you could'nt put a game into five lines? Well here we have a version of the classic Space Invaders program and the only difference is that you only have one crafty little invader to deal with

The program makes use of many Atari Basic features but the one most utilised is the assignment of the values 1 or 0 to a true or false Boolean statement

For example the expression X=2 yields a 1 if X is 2 or a 0 if X is not equal to 2 The ON GOTO statement is also used to good effect to give the missing IF THEN ELSE type structure

To get the program into five lines you will have to use Basic abbreviations shown but do not abbreviate the GOTO of the ON GOTO statement as this cannot be abbreviated to G

Unfortunately because of the length of the lines you must use the abbreviations and it is not possible to give a GIR with this listing

```
10 POSITION X,J ? "**", FOR U=0 TO 1
00+Z NEXT U SOUND 0,0,0,0 ?   " X=I
NT(5+20*A) Y=1 ON Z GOTO 20 GRAPHICS
0 POKE 752,1 G-20 S=0.2
20 A=RND(0) X=X+(A<C AND X<36)-(A>C A
ND X>1) B=STICK(0) G=G+(B=7 AND G<34)
-(B=11 AND G>0) W=(G>(X-3) AND G<(X+f
))
30 POSITION G,23 ?   , POSITION I,J
?     , POSITION X,Y ? " , I=X J=Y
Q=STRIG(0) P=124 C=0.5 POSITION 15,0
? SCORE ,SC
40 IF Q=0 THEN COLOR P.PLOT G+2,22 DR
AWTO G+2,1+Y+1 P=P-92 ON P=32 GOTO 40
 IF W THEN SC=SC+5 Z=1 S=S+0.02 SOUND
0,99,0,9 GOTO 10
50 Y=Y+S ON Y<22 GOTO 20 POSITION 12,
10 ? G A M E  O V E R ?    PRESS S
TART ON PEEK(53279)<>6 GOTO 50 POKE
77,0 RUN
```

POS	POSITION	SO	SOUND
GR	GRAPHICS	F	FOR
G.	GOTO	N	NEXT

3 DIMENSIONAL CUBES
from MATTHEW CROFT

HERE's a five liner that allows you to draw any number of 3D cubes on the screen When the program is first run a Graphics 8 screen appears with your first cube drawn and a message asks you to enter the two coordinates of the top left hand edge of another cube to plot

The cubes can be stacked put behind in front and either side of any other cube you choose to plot In fact they can be placed anywhere but don t enter any points over 280 on the first coordinate or 160 on the second as this will cause an error 144 – cursor out of range

If you wish you could add an extra line to reject any points above these settings To draw a cube behind another simply decrease both previous numbers by 10 and to plot in front of another cube increment by 10

If you experiment with these plots you can create some amazing effects

```
1 GRAPHICS 8 SETCOLOR 2,0,3 X=100 Y=1
00 ?    3-D BOXES COLOR 5
2 ? ENTER CO ORDINATES FOR NEXT BOX

3 PLOT X,Y DRAWTO X+20,Y DRAWTO X+20,
Y+20 DRAWTO X,Y+20 DRAWTO X,Y DRAWTO
X+10,Y+10 DRAWTO X+10,Y+30
4 DRAWTO X+30,Y+30 DRAWTO X+30,Y+10 D
RAWTO X+10,Y+10 PLOT X+30,Y+30 DRAWTO
 X+20,Y+20 PLOT X,Y+20
5 DRAWTO X+10,Y+30 PLOT X+20,Y DRAWTO
 X+30,Y+10 INPUT X,Y GOTO 2
```

Get it right!

MASS FORMATTER
from COLIN FROGGATT

HOW often have you had a pile of discs that you wanted formatting? well here is a five line program that allows you to do that without using that tiresome format option on your Dos disc You don t have to enter which drive you wish to format, or answer the y prompt Just get on with the job at hand

The program uses the Basic command XIO254, #1 0, 0, D1 to format the discs This will format any disc in Drive D1 in the density of the Dos you boot the system up with So Dos 2 0 is formatted to single density, Dos 2 5 to enhanced density Dos 3 0 – 87 Blocks

LINE BREAKDOWN

Line 1 sets up screen sets colour registers, turns cursor off and prints the title

Line 2 prompts you to press start to format the disc

Line 3 uses XIO 254 to format the disc and sounds a bell when finished

Line 4 prompts you to continue

Line 5 reports when an error has occurred

```
1 GRAPHICS 1 POKE 752,1 POKE 710,0 TR
AP 5 POSITION 1,2 ? #6, * MASS FORMAT
 BY *  * COLIN FROGGATT *
2 POKE 709,0 POKE 711,10 POSITION 3,8

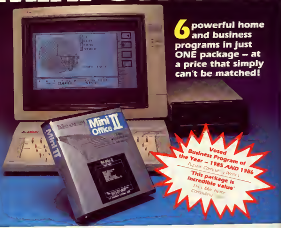
Mini Office II



6 powerful home and business programs in just ONE package – at a price that simply can't be matched!
Voted Business Program of the Year – 1985 AND 1986
Popular Computing Weekly
'This package is incredible value'
[illegible] Home Computing

WORD PROCESSOR
Compose a letter, set the print-out options using embedded commands or menus, use the mail merge facility to produce personalised circulars – and more!

SPREADSHEET
Prepare budgets or tables, total columns or rows with ease, copy formulae absolutely or relatively, use a wide selection of mathematical and scientific functions, recalculate automatically – and more!

GRAPHICS
Enter data directly or load data from the spreadsheet, produce pie charts, display bar charts side by side or stacked, overlay line graphs – and more!

DATABASE
Build up a versatile card index, use the flexible print-out routine, do powerful multi-field sorting, perform all arithmetic functions, link with the word processor – and more!

COMMS MODULE
Using a modem you can access services such as MicroLink and order a wide range of goods from flowers to software, send electronic mail, telex and telemessages in a flash – and more!

LABEL PRINTER
Design the layout of a label with the easy-to-use editor, select label size and sheet format, read in database files, print out in any quantity – and more!

Customising the system

LEN GOLDING gives you final details for adding that professional touch

IN this final part of our series we look at AUTORUN SYS machine code files, which will allow you to make your own Basic programs load and run automatically from Dos

Program I shows our now-familiar colour change routine in AUTORUN SYS form You can see the differences between this and the autoboot versions listed in parts 1 and 2 – only lines 270 to 370 look at all familiar

Notice first of all that no special header is required in our source code since the Assembler Editor cartridge will insert one automatically when you assemble the file to disc To identify it as a binary load file a six byte header will be placed before the actual machine code

The first two bytes will be set to 255, the next two will contain the load address and the last two will hold the address at which the load will end If you had to insert it manually it would look like this

```
START  BYTE 255
      .BYTE 255
      .WORD START
       WORD FINISH
```

Program I is a conventional AUTORUN SYS file which loads and runs on power up then hands control back to Basic

Dos extracts the load address and calculates the file length from the six-byte header, then it loads the file into the specified area – or areas, since there may be more similar blocks of data assigned to different places in memory

After all the blocks have been loaded it then looks to see if you have stored a run address in RUNAD (736 737) If so, it performs a JSR to that address and executes everything down to the final RTS, then hands control to Basic

Lines 410 and 420 set RUNAD during the load process to point to the start of our file If you don t store an address at RUNAD Dos will give control to Basic as soon as AUTORUN-SYS has finished loading, without running it

Alternatively you can store an address at INITAD (738 739) in which case the code at that address will run as soon as it is loaded without waiting for the rest of the file

System Reset handling is not as simple as it was with the boot formats we have been looking at so far When DOS SYS was first loaded it set the value of DOSINI to point to its own initialisation routine and, provided you don t want anything extra done during Reset, you should leave this value unchanged

The OS will then carry out Dos initialisation and hand control straight back to Basic whenever Reset is pressed

In many cases however, you will want to run some extra code of your own after System Reset has been pressed so DOSINI will have to be altered You could make it point to any address in your own code but then Dos initialisation would be by passed thus disabling the Dos file management system disabled

To get around this problem lines 130 to 160 copy the original value from DOSINI into the operand of *JSR INITDOS* This effectively transforms line 240 from a simple time delay into an instruction to initialise Dos Then lines 170 to 200 change DOSINI so that it points to our extra Reset code, at *WARMST*

Now when Reset is pressed the OS jumps via the new value at DOSINI to *WARMST* carries out the Dos initialisation and then returns to execute all the code between *WMST2* and the final RTS It then hands control back to Basic

If you want to extend the Reset routine put your extra instructions between lines 200 and 210 (renumbering the program, of course) while any extra power up code should go between lines 260 and 290 If you stick to this layout, your AUTORUN SYS file will always behave correctly

Saving Program I to disc is easy Just type

```
ASM,,#D:AUTORUN SYS
```

automatically Alternatively you could use Program II to make the same AUTORUN SYS file from Basic Notice that in this case the header data must be included in the DATA statements (line 70)

To round things off let's look at an AUTORUN SYS file which will load and run a Basic program automatically on power-up Program III is the source code for those readers who are interested

It inserts a new editor handler which allows you to put a line of text into the computer s text buffer during power up When Basic takes control it will assume that you have just typed that line and hit Return If the text line contains

```
RUN D
```

followed by your filename the specified file will load and run as soon as Basic takes control Program III also changes the text luminance so that the READY message can't be seen while your Basic program is loading This makes it look more like a commercial disc autoboot

The source code is for interest only – program IV is the one to use It starts by putting the machine code into page 6, with 12 blank spaces left for the file name Then it asks you for a name such as PROGRAM1 BAS or MENU and rejects anything that is too short or too long

You could improve the program by adding more sophisticated checks to ensure that the file name is legal in all respects The name is inserted into page 6 at the appropriate point in the machine code then line 70 creates the AUTORUN SYS file for you

Now whenever you switch on with that disc inserted, a chain of events takes place First DOS SYS is loaded and after being initialised, it takes control and looks for an AUTORUN-SYS file on the disc Once run, our program inserts a text line reading

```
?CHR$(125) POKE 709,202 RUN D filename
```

Basic now takes control, and carries out the instructions in the text line This clears the screen makes text visible again then finally loads and runs the specified Basic program The net result is difficult to distinguish from a single stage machine code autoboot

AUTORUN SYS is ideal for customising the operating system or even adding extra facilities to Basic itself and we will be presenting a few interesting routines in future issues

→

THE O.S. CONTROLLER CARD

THE DESKTOP MANAGEMENT SYSTEM
FOR THE ATARI XL/XE COMPUTERS

One of the most powerful features of computers like the ATARI ST or the COMMODORE AMIGA is the ability to run commercial software and have a range of utilities in memory all the same time (better known as DESKTOP UTILITIES). With the O.S. Controller card installed into your ATARI 800XL/130XE you too can have this powerful feature and more.

DESKTOP MANAGEMENT SOFTWARE INCLUDED WITH THE O.S. CONTROLLER CARD

THE SHQ SNAPSHOT PRINTER DUMPER (With [illegible]) [illegible] computer or that matter that will allow you to dump whatever is on screen [illegible] these great game screens, printouts of these masterpieces from your art packages or screens from application software and all at the touch of a button with a printout that matches a photocopy.

THE PROGRAM DUMPER When your Happy's unhappy, your Archiver won't archive or your Freezer won't Freeze then there's only one answer 'THE DUMPER'. The only effective way to upgrade your cassettes to disk or make disk to disk backups [illegible] and they're completely protected too!

THE O.S. BOOT MENU Using multiboot menus, fed up having to reboot the computer to reenter the menu itself on your software then doing it all over again? If the answer is yes then the O.S. BOOT MENU is for you, just a press of the HELP key and you're presented with a memory resident menu. Instantly.

I/O ANALYSER – A unique and very powerful disk debugging tool.

O.S. PARAMETER CUSTOMIZING Have you ever wished you could alter the O.S. default setting? With this feature you can alter the master character set, switch on or off the noisy I/O (that's that terrible sound you hear when loading or saving a disk or [illegible] etc.) the key click, inverse flash, or [illegible] a high [illegible] (makes writing in your word processors or graphics programs so much easier), alter the primary [illegible] and lock them.

[illegible] OPERATING SYSTEM SAVER – This tool will allow you to save the O.S. from the 400/800 Atari computers to create true emulators or transfer customised ROMS such as OMNIMON to disk and then run on your XL/XE computer.

OTHER DESKTOP MANAGEMENT UTILITIES DISKS AVAILABLE

1020 SNAPSHOT PRINTER DUMPER Get the most out of your 1020, similar to the SHQ or [illegible] with a shade selector.

THE PROFESSIONAL PRINT SERIES

SHQ PRINT LINK GRAPHICS CONVERTER Gives your graphics packages like Typesetter (XLENT SOFTWARE) photocopy quality printouts. When tested against leading desktop publishing packages for the ATARI ST, the ATARI 8 BIT won hands down! So before you rush out and buy a laser printer just check us out first, you won't be disappointed.

SHQ PRINT LINK TEXT CONVERTER/SHQ PRINT LINK NLQ ENHANCER These utilities allow you to get the most from your printer's text modes, gives your NLQ mode a more professional Daisy wheel effect finish or if you have a printer with no NLQ then use the text converter or simply use these to get more out of your printers. Please note that your printer must be able to handle reverse line feeds to use the above text utility links.

2 BIT SYSTEMS: MUSIC PRODUCTS FOR THE 48K ATARI

REPLAY

Replay is a complete sound sampling system that allows you to produce real speech/music on any 8-Bit ATARI
Features.
Sample rate selectable from 6Khz to 21Khz.
Sample playback through TV/Monitor allows samples to be used in your own Basic programs
Supplied on cartridge no user memory lost
Records from Hi-Fi or external recorder
New V2.0 Replay program with bigger option
Also included in the REPLAY PACKAGE

Digidrum Digital drum sequencer (no hardware required) allows you to create your own Drum rhythms using 3 sampled drum sounds.
Digisynth Simple sample sequencer (no hardware required) allows you to play tunes using sampled sounds (dog barks, guitars, voices etc.)
Echo A real-time Echo program to create special effects Delay variable between 2ms to 1 sec.
Prices
REPLAY system (cartridge software, Digidrum and Digisynth) only £39.95

MIDI MASTER

A full feature MIDI interface for your ATARI, allows you load full control of synths etc.

Features
- MIDI In/out ... for easy connection
8 Track Real time sequencer with tempo correction
Casio CZ ... voice editor (allows you to edit and store ... on Disk/Tape)
Yamaha DX 100/21 ... voice editor
Music player program (allows you to play Music composer or AMS2 files via MIDI)
- ... includes DX7 voice editor
CZ menu and split program

NB We will be producing other voice editors for different synths so if you own a different synth get in touch.

FUTURE RELEASES
To enhance MIDI MASTER to include a 16 voice polyphonic sequencer

PRICES
MIDI MASTER (interface CABLE plus software) only £29.95

PERCUSSION MASTER

A high quality professional drumkit for the ATARI.

Features
External D/A and step to ensure high quality sound, which plugs into joystick ports 1 & 2.
- 9 sampled drum sounds.
- Polyphonic Rhythm editor using pull down menus and windows
Capability to load new drum sounds from disk
- Includes correction version of REPLAY software allowing REPLAY owners to sample sounds with a far greater resolution.
- Includes digital echo program for use with the REPLAY cartridge
- 3 Channel polyphonic
- 100 song entries
Audio output via hi-fi
PRICE
PERCUSSION MASTER hardware & software £29.95

DIGIDRUM II

A digital drum machine/sample sequencer that requires no extra hardware

Features.
9 sampled drum sounds
step time pattern entry
- Capability to load Replay samples into any of the 9 sample positions
- KITS can be created or saved to disk or cassette
2 Channel polyphonic (any two drums)
- 100 Song entries (with samples looping)
32 Rhythms (4-32 Beats/Bar)

PRICES
DISK £6.95
TAPE £5.95

Battle stations

Product Astro Droid
Price £9 95 (disc) £7 95 (cassette)
Supplier Red Rat Software, 11 Fennel Street Manchester M4 3DU
Tel 061 835 1055

IS it a bird? is it a plane? No it s Astro Droid the latest release from Red Rat Software You take on the role of a $200 000 000 machine of destruction, a cyborg, a machine with a human brain – an insane one at that

You are first presented with an impressive title screen When the rest of the program loads this changes to a 3D scrolling starfield, with a prompt to press the fire button to start

Playing in the background is a catchy tune that suits the game s mood very well This continues to play all the way through the game

When you press the fire button you are enter the Median Sector and go single handedly into battle against the evil Reldans to force them back to their own galaxy

You do this by flying over their 50 mile long neutron powered starships blasting away at their positronic laser batteries and destroying enemy fighters that attempt to crash kamikaze-style into you

After you have inflicted enough damage to their craft you move to a bonus level which involves avoiding fighters in deep space

Once the fighters have been destroyed you progress to another space sector with yet another starship to obliterate

The first impression is good – the screen scrolls very smoothly the fighters appear and attempt to dive bomb you However after I had been playing a while it began to remind me of Screaming Wings, an earlier Red Rat game Fighters fly at you in a similar way even the way your droid moves around the sreen

This does not detract from the skillful content of the game – the fighters are very hard to shoot and the wreckage can destroy you if you are not fast enough

Dotted along the starship are different letters If you shoot at a letter C you cause your droid to turn into an invisible attack ship, but this transformation only lasts for a limited time

The time remaining is displayed at the bottom of the screen If you look closely at the starship the letters XL appear frequently – a nice touch

This is a one player game using the joystick in port one In certain parts of the game you are required to move your droid to the left or right of the screen to indicate if you wish to fly above or below the starships

The scoring system is easy and you gain points for blasting the fighters with bonus points awarded for hitting special targets and for surviving the deep space section

There are many nice features, such as the ability to fly on either side of the starships Visible through the ships is a very nicely scrolled starfield which gives the impression of depth

The way that your droid transforms into the sleek attack ship is smoothly done and does not interfere with the screen's scrolling

My only quibble lies with the instructions, which are very short and contain an error when telling you how to load the disc version They indicate that you hold Start and Option keys when powering up your machine In fact you only hold Option to deselect Basic

Apart from this, I was very impressed with the game and if you like to see your enemy vanish in a hail of laser fire this is the one for you

Neil Fawcett

Fast and frantic

Program Attack of the Mutant Camels
Price £1.99
Supplier Mastertronic 8-10 Paul Street London EC2A 4JH
Tel 01 377 6880

MINTER Madness is about to burst on to your screen as cut price king Mastertronic rereleases the games that made Jeff Minter into a megastar

Minter might be more famous for his C64 games, but he's always had a soft spot for the 8 bit Atari Attack of the Mutant Camels is the game that started it all

As with all the best shoot 'em ups, Mutant Camels is easy to play but almost impossible to master The plot revolves around your attempts to foil the Zzyaxian's evil plot to destroy the Earth

These dastardly aliens secretly abducted a herd of camels and have genetically engineered them into 90 foot high, laserbolt-firing, neutronium-shielded war machines that now march relentlessly on their path of destruction Your job is to stop them

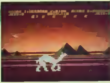
The countries of the world have united to provide you with a small but highly manoeuvrable ship to fly between the deadly beasts blast them with neutron bolts (thus wearing down their shielding) and finally destroying them – while avoiding their laser bolts

I found the best tactic was to hurtle towards the first camel (so you don't waste any time), get behind it and blast away

Naturally you should avoid the laser bolts but stay as close as possible as you'll score more hits

In between waves you must survive a hyperspace hurtle through an asteroid belt, so keep your nerve

Attack of the Mutant Camels was Jeff Minter's first game and as far as I'm concerned, it's still the best. Fast, frantic action, now at a budget price What more could you want?



Tony Hetherington

It's a knockout!

Program Fight Night
Price £9.95 (cassette) £14.95 (disc)
Supplier US Gold Unit 2 & 3, Holford Way Birmingham B6 7AX
Tel 021 356 3388

FIGHT Night offers five different modes of play – main event, construction, training, sparring and tournament

Control of your boxer is by joystick and you are limited to eight basic moves – fake or throw a punch to the body or head, put your guard up or down, and move left or right

Although punches never actually seem to connect, the recipient nevertheless doubles up or jerks his head back as appropriate

To defeat an opponent in the three, three minute rounds, you must either out point him or knock him out.

Each time you land a blow your score goes up and the contender's KO indicator increases The greater the length of the KO indicator the closer to being knocked out

All options are selected from the title screen The main event has you fighting five plug-ugly computer-controlled boxers each one stronger that the last

Construction mode allows you to create up to 24 of your own boxers

You can select head, body feet and shorts Then your creation is either controlled by the computer or by a player and can balance the strengths (100 per cent split between head and body) of the power of the boxer's blow and his resistance to blows

If the boxer is to be computer-controlled you can also adjust the balance of offensive and defensive moves and the split between action and intelligence

Sparring mode lets you call up any two boxers to fight You can have computer v computer (in which case you sit back and watch), player against computer, or with a second joystick, player against player

Training mode lets you call up any boxer to punch away at a bag You may operate in Follow or Lead mode at a selected speed allowing you to practice joystick control as well as being able to evaluate a created boxer's power

In Follow mode you simply move your joystick in accordance with an illuminated position on a displayed joystick chart In Lead mode, you can move the joystick at will

In Tournament mode (disc only), two players can set up various boxers against each other in a knockout competition

The graphics are of a fairly high standard although the animation is a little on the slow and jerky side

Presentation is excellent from the ease of selecting the various options, to such things as the use of an admission ticket as a header screen before a contest

Sound effects are only fair – a little bit of music and simple crashes whenever a punch lands

All told, Fight Night provides genial, no nonsense entertainment and is certainly the best boxing simulation around Good humoured and good value for money

All aboard Loco

Program Loco
Price £1.99
Supplier Alligata Software
1 Orange Street, Sheffield
S1 4DW
Tel 0742 755796

BRITISH Rail was never like this. Alligata's new release puts you in charge of a classic American steam train on a journey more hazardous than anything Casey Jones ever undertook.

Most of the screen is taken up with a side-on view of an impressive red steam engine.

The engine chugs away to the right along the track, or rather it gives that impression. In fact, the train stays in the centre of the screen while the background scenery (blue skies, green fields and mountainous terrain) slides smoothly to the left.

At the bottom of the screen is an overhead view of a criss crossing, six lane railway system. This lets you see some distance ahead and behind and so works as an early warning device.

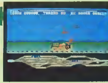
Your train has a limited supply of fuel and the only way you can take on more is by visiting fuel dumps sited around the system.

To do this you'll need to change lanes from time to time – accomplished by pushing up or pulling down on your joystick.

There are other reasons why you'll need to keep a weather eye open. A dynamite-laden handcart will come rattling along the tracks at frequent intervals. If it hits your train, you're a goner.

Mind you, there are means other than evasive action to deal with that particular peril. A quick pull to the right with your joystick fires a missile – very handy when you're on a collision course with a handcart.

Danger also comes from the skies in the form of planes and airships which drop red bombs. The best way to deal with this aerial bombardment is to fire a blast of smoke upwards from your engine. (Smoke that destroys bombs and aircraft? The laws of physics have been rewritten again!)



Holding and releasing the fire button controls the height of your smoke clouds which rise to the desired height and then drift off to the left, hopefully eradicating aerial objects on impact.

There are 10 levels to deal with and a choice of speeds (fast or slow). At least the instructions say there are two optional speeds, but don't tell you how to select them.

No matter what keys I pressed or how I waggled the joystick, I never did find out how to race at top speed.

Neither do the instructions mention that there is a Pause facility (key P to pause, anything else to continue).

Loco is excellent value for money. High quality graphics, sound and gameplay make this a must for your library.

House to forget

Program House Of Usher
Price £1.99
Supplier Midas Marketing,
35 West Hill, Dartford,
Kent DA1 2EL

ANOTHER platform game, I'm afraid, and not a terribly good one at that even taking into account its cheapness.

The main screen of House of Usher is supposed to represent the reception hall of this ill famed house.

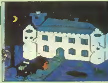
To enter a room, you simply position your small, rather nondescript, character in front of a door. By pushing forward on the joystick and pressing the fire button the screen will change to show the appropriate room.

Every room offers a series of platform puzzles. Most involve dodging mobile objects such as monsters, cannonballs, boulders and so on.

You have three lives and touching any object will cost you one, as will mis-timing a jump over a gap between platforms, or falling off a ladder.

In some screens, you must collect items, in others you simply need to reach the exit. One screen has you jumping hidden gaps, the position of which are shown only by a tiny inset map.

When you have successfully negotiated all the rooms you will be allowed to enter a mystery room (the Treasure Chamber). From here you can catapult yourself into the Final Room via a spring.



Every time you enter this last room you will be given the chance to pick a letter of the alphabet to discover whether it forms part of a secret codeword.

What happens in these last two rooms and what results when you discover the code word can only be guessed at, since I have not so far reached them – due in equal parts to my lack of skill and the absence of interest or excitement generated by the game.

The price is low, but there's no doubt you could find better value in many other budget releases.

Even better, why not save a few pence more and buy Edgar Allan Poe's The House of Usher in paperback form – far more exciting than this game.

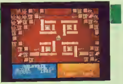
Worth the wait!



Program Gauntlet (minimum 64k)
Price £9 99 (cassette) £14 99 (disc)
Supplier US Gold Units 2 & 3 Holford Way Birmingham B6 7AX
Tel 021 356 3388

AT last, it's here! I've been waiting for Gauntlet for so long I almost began to think that US Gold wouldn't release it

If you read the preview of Gauntlet in the April issue of *Atari User* you know that it is a conversion of the arcade game

The first thing to appear when you load the game is the arcade title screen of Thor the Warrior and Thyra the Valkyrie in action

Then you choose between a one or two player game then which character or characters you are going to use (warrior valkyrie elf and wizard) I chose the wizard, for his powers with magic Then you move into the game itself

The first few levels are easy, compared with what's to come later on To start with, you only come across relatively harmless ghosts

But as you get deeper into the game, you come across grunts lobbers demons and a friendly character known to his pals as Death

Keys and potions can be found and used in the dungeons, as well as food and drink to replenish your health But take care what you consume as some food and drink is poisoned

The exits are marked with a large E, and transport you to the next level One of the later levels is a dungeon filled with exits, except for a few pathways littered with food, drink and treasure

In this the exits are more of a disadvantage than anything, although in other levels you may not be able to find the exit so if you leave the joystick alone for about a minute all the walls turn into exits

That gives you just an idea of what Gauntlet is like Play is just a bit slow compared to the other versions, but it's still good fun The music is a little rough, but you don't find yourself listening to it that often – you're too engrossed in the action

The treasure rooms are included as well as levels where shots stun and hurt other players The selection screen is impressive, using four colours and the sprites and scrolling are both extremely fluid

The game is very addictive You can find yourself collecting treasure in an otherwise empty room, then be attacked by dozens of monsters all at once

Overall Gauntlet is totally wicked Although you only have a single colour shaded screen the game play more than covers that

Take my advice Run the Gauntlet!

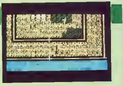
A wizard time . . .



Program Wizard's Crown
Price £19 99 (disc only)
Supplier SSI c/o US Gold Units 2 & 3 Holford Way Holford Birmingham B6 7AX Tel 021 356 3388

IF you've tried adventures but find they lack depth or restrict your movements, why not try a computer role playing game?

They don't quite match up to the real role playing action and atmosphere of games such as Dungeons and Dragons and Chivalry and Sorcery but they do come close

Wizard's Crown provides you with a massive world of magic, monsters and mayhem to explore There are towns, dungeons and ancient ruins that SSI claims will take you a 100 hours to complete

Somewhere in the land lurks the evil wizard Tarmon who stole the Crown of the Emperor Your quest is to get it back

If you're to stand any chance of surviving – never mind solving – the game you must manage your party of eight adventurers so that the rangers and fighters are supported by magic wielding sorcerers, healing priests and lurking, scouting thieves.

Each character has a rating for its strength, dexterity, intelligence and life (health points) as well as specific skills such as fighting haggling or casting any of the sorcerer's 22 possible spells

Play is controlled by entering single key commands to move your party around a wilderness map which then expands for combat

In such a battle each character and monster is moved independently, depending on its dexterity Single key commands contol moves, attacks, loading and firing bows, casting spells, healing wounds, sneaking by thieves and evasive action such as ducking or zig zagging

As your characters survive battles and fight for plunder they will gain in skills, experience and power, equip themselves with magical weapons and powerful potions

This depth of character and gameplay make up for the elementary graphics and almost constant disc accessing The result is an enjoyable game that will take months to solve

Do you already own a computer
If so, which one do you own?

By MICHAEL A. BAXTER

HAVE you ever thought of yourself as a bit of a William Tell? This challenging game gives you the chance to show everyone what a crack shot you are. You take the part of a slightly eccentric character who enjoys bouncing up and down on a trampoline while shooting at various objects with a crossbow.

Unfortunately for you, these objects happen to be obscured by an endless stream of indestructible balloons that drift up the screen, causing you endless trouble. Your timing is critical. You have only a limited number of crossbow bolts, so shoot carefully.

The game can be played by one or two players using joysticks plugged into ports one and two. The crossbow bolt is fired by pressing the fire button, and the speed of the man bouncing up and down can be altered by moving the joystick up and down. The game consists of three individual rounds.

ROUND 1: Has you bouncing up and down shooting at a standard archery target. The closer your bolts are to the bullseye, the more points are gained. This is the easiest round to play, and gives you practice for the harder ones that follow. The main problem is that the balloons keep getting in your way.

ROUND 2: You are attempting to shoot small glass jars off shelves and gain five points for each one that you manage to hit. But this is not as easy as it sounds, as those drafted balloons again obscure most of your vision.

ROUND 3: In this, the hardest level to master, the true archer comes out in all of you as you try to shoot apples off the heads of two men. If you shoot a man he dies and you only have one apple to shoot at. If you shoot both men then the game automatically ends, regardless of how many bolts you have left. And all the while those accursed balloons continue to stream up the screen annoying you. When you kill a man (and you most probably will!) he vanishes and a tombstone appears with R I P carved upon it, just to remind you of your hideous crime.

Once you have typed the game, save it to tape or disc as it uses various machine code routines to manipulate graphics. Any errors in the code can lock the computer up and thus you would lose your program. All REM statements can be removed, and if you have any problems typing it in you can refer to the accompanying Get It Right! listing.

VARIABLES

N N10	Constants 0 10
VEL	Determines the velocity of the bounce
YLOC	Bounder s Y coordinate
PLYRS	Number of players (1 or 2)
YMAX	Maximum height of bounce
DARTS	String holding Mcode for the dart
PCL$	String holding Mcode for clearing the player missile area
VBIN$	String holding VBI initialisation routine
VBOFF$	String holding routine to turn VBI off
MOVE$	String holding Mcode to move memory (used with character set)
HI$	String holding high score
INIT$	High scorer's initials
SC$	Current score
SC1(nn)	Array holding score for both players
B(nn)	Array holding status of glass jars
AP(nn)	Array holding status of apples and condition of men
YD	Reserve darts (indexed with screen Y coordinates to print darts)
MPL	Memory start for PLM stripe holding the dart
Y	Coordinate of the dart
ROUND	Round number (1 2 or 3)
DEAD	Flag True if both men in armour have been shot
G A L,I,HL	General variables used in the listing

PROGRAM BREAKDOWN

10 30	Initialise variables and strings
50 70	Main program control loop
100 107	Dart moving routine
110-112	Handles end of round routine checks for two players
120-125	Check for dart hitting target, alter score accordingly
130 155	Check for dart hitting glass jars
180 199	Check for dart hitting apples or men
200 225	End of game and initial entry routine
500 575	Draw screens
1000 1120	Introduce options page
5000 5500	Define characters and data
6000 6130	Set up player missile graphics
6150 6170	Install machine code to move dart
6200-7080	Install VBI DLI routines and data
7100-7108	Reset values before new game starts

MEGAPAC

520 STFM SYSTEM BY A.S.&T.

The new 520 STFM from ATARI has been an instant hit since its announcement. The design has gained from experience with earlier ST and STM machines and the result is a practical and superbly engineered computer that will easily find its place in your home as well as in your business.

MEMORY:

The new 520 STFM has 192K bytes of ROM, an optional 128K bytes of plug in ROM cartridges and 512K of RAM. The MEGAPAC 520 STFM has bigger memory — a full ONE MEGABYTE of RAM, like the 1040 STF.

DISC DRIVES:

The basic 520 STFM has a built in single-sided disc drive. The MEGAPAC 520 STFM comes with two drives, one internal and one external. The drive is double sided, giving twice the capacity (720K) of the built in drive (360K). Your disc bill can be cut by almost half when compared with that of basic 520 STFM users.

PROCESSOR:

The Central Processor unit (CPU) is a Motorola 16/32 bit 68000 chip running at a clock speed of 8 MHz. It is further enhanced by Atari's own custom Co-processing a Direct Memory Access (DMA) channel for fast data transfer with other peripherals such as the ATARI SH204 Winchester drive or the Atari Laser printer (available soon) and a real time clock.

DISPLAY:

The 520 STFM can display 40 or 80 column text on any domestic TV or colour monitor such as the Philips CMS533 or the dedicated ATARI SM125 high resolution monochrome monitor. Graphics is 600 × 400 pixels on the SM125, 640 × 200 pixels in 4 colours or 320 × 200 pixels in 16 colours on a colour monitor or TV. The colour palette contains 512 possible colours. Some ATARI software indeed uses the exceptional display hardware to produce stunning graphics with up to 29K colours at once.

MIDI INTERFACE:

The 520 STFM has 3 programmable sound voices and a Musical Instrument Digital Interface (MIDI) to allow direct connection to a wide range of musical organs and synthesizers such as the Casio CZ230S.

MOUSE:

The 520 STFM has its own dedicated mouse as part of the standard hardware.

PERIPHERAL CONNECTORS:

The 520 STFM can be easily expanded by plugging in add-ons through its ports. They will connect printer (Centronics port), modems (RS232 port), musical instruments (Midi port), sensors (joystick port) and fast intelligent devices such as network, Winchesters, laser printer etc (SCSI port).

BUILT-IN SOFTWARE IN ROM:

The 520 STFM has 192K bytes of built in system software in ROM. This comprises GEMDOS, the disc operating software which is now becoming the dominating standard for 16 bit computers and GEM the Graphic Environment which uses pictures and drawing instead of cryptic messages to communicate with the user and the electronic Mouse in place of the keyboard to enter the user's commands.

SOFTWARE ON 5 DISCS:

The MEGAPAC 520 STFM comes with 5 discs containing an impressive collection of software by any standard:
Disc number 1 contains the BASIC language
Disc number 2 contains LOGO + DOODLE + MEGARO DS and STWRITER a WORDPROCESSOR program
Disc number 3 contains Neochrome, a painting program and demo pictures
Disc number 4 contains CPM utilities
Disc number 5 contains the CP/M emulator

GREAT VALUE — *ONLY FROM A S &T*

A S &T has been the leader in memory and disc drives for the ST computers right from the beginning. We are also ATARI main dealers, an ATARI approved service centre and the largest ATARI agent in Essex. Count on us to provide you with proper guarantee, support and service for your ST system on every level.

A S &T MEGAPAC 520STFM is quite simply very good value for money.

We add all the goodies to an already superb computer before you have it. This cuts costs. If for example more RAM is to be added later to the 520 STFM extra steps will have to be taken such as check in and check-out and the work will be carried out on one-off basis. It will therefore cost more.

Buying an A S &T MEGAPAC instead of a basic 520 STFM means that you will have a complete system with everything added right from the beginning. After all, why should you make do with half the memory and put up with swapping discs with just one disc drive?

OUR PRICE PROMISE:

Some of our competitors promise you a price-match. All that means is overcharging you in the first place. The A S &T MEGAPAC offers such outstanding value that we do not have to promise — and all the phone calls and frustration are cut out straight away.

Self portrait

Ranging far in magic lands

by Ruoloc

WELCOME heroes everywhere to another visit to the world of Adventure. First of all I must announce a change of party members. My old pal Brillig has decided that the lure of the new ST has proven too much of a temptation even for him. He has gone off to concentrate on that for *Atari St User*

As for me. Well, having just defeated the evil Krill and seen off the Demon Jasarr on behalf of the Great Balboz and his Circle of Enchanters, I find myself at somewhat of a loose end. It seems that my prowess has preceded me and all known adversaries have fled, so my Wizard/Ranger skills are not needed at this time.

On occasions such as this, when I am resting, I often turn to my trusty Atari and indulge in a spot of computer adventuring. In fact, having solved countless quests in my time I suppose you could look on me as something of an expert, and if modesty permits, I could pass on some valuable help to any of you who might be in a spot of difficulty.

Brillig has kindly passed on his postbag to me and as of this month I shall be delving into it to see who is in trouble.

The Pawn (ah Karovnia, when again shall I look upon your beauty) is the subject of the month, and to support it I shall give you many hints to the solution in a cryptic form only, for those of you who might not want the secrets divulged completely.

You may have read last month of the imminent release of Guild of Thieves. Well, the final touches are being put to the game as we speak but also on the drawing board at Magnetic Scrolls are five more adventures to be released over the next two years, so hurry up and solve Guild before you're faced with a backlog.

On that note I feel a competition is in order so the first person to send me the list of all the treasures needed in Guild (and remember, I have seen it already so I know the answer) will win a prize.

See you next month

Clues to The Pawn

Game objectives

- Get the wristband removed
- Kill the adventurer
- Rescue the princess
- Kill Kronos
- Vote for Gringo

The note Kronos has offered you the note, now what, take it or not? If you refuse he'll not be very happy. If you take it, you'll need to find a king.

The shed Where do you leave your keys?

In the shed The plant needs to be planted a bit better, look at the bench more closely.

The guru Could you cover the band maybe? He needs a drink. Maybe a climb will find liquid, but you'll need something to put it in.

The boulders Big aren't they? One object couldn't possibly move them by itself but two together ... mmm.

The snowman He won't talk but maybe he'll warm to you in a colourful way.

To kill the adventurer Ask Kronos about the band.

The lava river Try moving the pedestal. Breaking a wall could do more than just damage.

Maze Exit maze?

Vote for Gringo Ballot paper I think. In the safe I think.

The double doors Be very polite. The porter may be thirsty, so is Lewis.

Kill Kronos The bottle needs to smash. Feeling strong?

The dragon He is a bit blind. Point out some other people in the shadows. Wearing Kronos clothes. Whatever next?

The platform The cream door could be knocked down.

Open the palace The key is feeling Blue.

Postbag

DOES anyone out there have any answers for Donna Thresher, who is stuck in Ten Little Indians? She can't get out of the carriage

Adam Marshall would like a map of Alternate Reality and thanks to reader Vic Rowland I shall provide you with one next issue

John Sweeney is not happy about Brillig's review of Moonmist and writes that although he said it is specifically aimed at adult gamers new to adventures and on this basis he judged it to be in some part a failure it does say on the box that it is for ages 9 and up

It is in fact a superb game for 9-year olds, as Infocom's previous two introductory level games were actually much too hard for the average youngster

Also to answer John's plea about Ulysses and the Golden Fleece to get past Pluto throw DUST which you can find in a hole in a tree on the Island of Storms

Thanks for your letter John and with regard to Moonmist I entirely agree with you and the idea of four different endings is truly wonderous

Adventures Unlimited are four boys from Manchester who between them have solved over 60 quests and offer help if you write to them at Adventurers Unlimited c/o Stewart Townsend, 1 Taunton Ave Flixton, Manchester M31 1PQ

Mrs Greenway has shattered nerve endings and a nearly exploding brain due to the Pay Off For 10 months she has been in the Box Room unable to get the box containing the gem The April issue of *Atari User* carried a complete solution for you but if you missed it, get the list from the chamber and drill box (the number s on the list) open box and get gem

The answer comes from Chris Beard who says that J C Bradbury asks where to find the combination in Lapis Philosophorum You need to clean up the sheet of copper using the rags from the monastery then use the copper to reflect some hieroglyphics on a boulder in a swamp Also to enter the cave just type enter cave then play hangman with the Troll

Lastly I have received a letter from Robert O Leary the boss of Robico Software who is puzzled as to why a mention of his Rick Hanson Adventure has not been forthcoming in the column He puts it down to the fact that I haven't got a copy so he kindly sent one with this letter

So to Robert I say Robico and Rick Hanson there I've said them twice now thanks for the disc and I'll have a look at it for next month

Good luck with The Pawn I'm off to sharpen my trusty sword and practice a few spells See you next month ■

High tech thrives on Sark

THE bucolic island of Sark – population 500 and not a car to be seen – is surprisingly a major user of information technology

"Sark is a thriving financial centre due to its tax free status so electronic communications are a vital element here explains MicroLink subscriber Philip Stokes who has lived on the island for 13 years In fact I reckon we have the world's highest ratio of telex and fax machines per head of population

Philip owns a gift shop but he used to work on the London Stock Exchange and when he isn't serving tourists he operates an administration service for offshore companies

Efficient movement of documents is essential to properly maintain an offshore company's Sark registration says Philip

But while the ferries carrying our mail run like a bus service in the summer rough winter weather can easily cut us off for days at a time

The Guernsey authorities are about to provide an electronic mailbox facility which will help make up for our lack of PSS and I'm confident my investment in computer communications will have paid for itself within a year thanks to MicroLink

Help for the handicapped

A CALL for computer users to put their brains to work on behalf of the handicapped has come from MicroLink subscriber Brian Vallot Lewis

Brian is disabled by a rare disease called Friedreich's Ataxia which affects a victim's coordination balance and speech

He says I'm extremely lucky in that I'm still just about mobile but others are not Many sufferers are completely untechnical but some of us can see huge possible benefits from the use of a micro

I am currently working on a dictionary word entry system the main advantage of which would be greatly reduced use of the keyboard in word processing and programming

This is only one example of the kind of thing we need Help with software ideas complete programs or just tips and advice could open one of the prison doors for someone confined to a wheelchair

Your chance to join MicroLink see Page 4

Discounts on view

THE latest firm to display its wares in MicroLink's Shop Window section is run by Paul Lange descendant of a Lithuanian family which emigrated to Britain at the turn of the century

Paul has been exporting computer software and peripherals to home and business users overseas for the past two years His customers range from Europe and North America to Australia Israel and North Africa

Recently he decided to extend Veyair's discount offers to UK residents and chose Shop Window on MicroLink to display his products

LINK TO CUT COSTS

TO combat the effects of the crippling disease which afflicts more than 15 million people worldwide the Leprosy Mission helps support more than 2 500 doctors nurses and paramedics caring for 400 000 lepers in 30 countries

The interdenominational Christian organisation has 16 area organisers throughout England and Wales who are being connected by MicroLink electronic mail in a pilot scheme designed to speed the flow of information while cutting the cost of communications

We hope to make savings in our overheads that will allow us to send more money abroad to help leprosy victims said Dr Tony Lloyd the man in charge of the project

To produce and circulate a memo to our area offices in the UK can cost as much as £25 – by MicroLink Email we should be able to do the job for under £2

From the Antarctic with love . . .

ELECTRONICS technician John Mackintosh couldn't work much farther away from home than on a scientific research vessel in the icy waters of Antarctica But he is in constant touch with his wife in Scotland thanks to a combination of MicroLink and Inmarsat the international marine satellite system

Contracted to an international scientific foundation John's ship travels all over the world doing ocean research

For some time it has been using electronic mail as a relatively cheap alternative to regular telex services for communicating with its base office

So when I was looking for a means of keeping in touch with home while at sea the obvious solution was Email said John

Inmarsat is an extremely reliable means of communications – though it's expensive at about £5 a minute By using a MicroLink mailbox however my wife and I can exchange letters in a fraction of the time taken by voice calls and make considerable savings

Because MicroLink is available 24 hours a day I don't have to set up any particular schedule with my wife and I can use the ship's communications system whenever it is available

WEAVING A TANGLED WEB

By
GEOFFREY STOREY

MONEY, and lots and lots of it, is scattered around a two dimensional dungeon with 10 levels All you have to do in this game is walk up and take it

Sounds easy But living in this dungeon are two eight legged, furry money spiders And these horrible little creatures get very annoyed when you try to take their savings

Luckily for you they are not very intelligent, and you can avoid them by confusing them at junctions This can be done by watching which way they travel when they encounter a gap in the walls and moving in the opposite direction

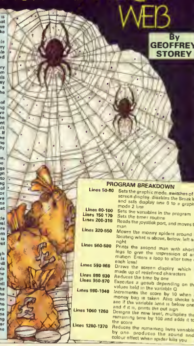
You have to travel from the top of the screen to the bottom collecting the moneybags When you have enough, an out sign will appear in the top left hand corner and at this point you make your way to the exit avoiding the spiders on the way up If this sounds too easy, a blue bar at the top of the screen indicates a time limit which is running out fairly quickly

Moneybags is a one player game, played with the joystick in port one During the game a few moneybags may still be left when the out sign appears and these can be collected to obtain extra points Each moneybag is worth 10 points and at the end of each level you gain a bonus for completing the screen You have three lives at the start of the game and if you lose a life you'll begin that particular level again

There are 10 levels, each a little harder than the previous, with level 10 as the most challenging – where the walls and doorways of the room are invisible The screen layout is randomly generated, so each level and game will be different.

The computer keeps your high score only while the program is running Pressing system reset will purge the variables containing this information, so you only have the score table as a temporary challenge

When first run, the initialisation will take around 10 seconds due to the characters being redefined and the setting up of a machine code routine that animates the spider's legs The Break key is disabled by the two pokes in lines 50 and 1390 because there are interrupt routines running which continue to execute even after it has been pressed To abort the game press the System Reset key



PROGRAM BREAKDOWN

Lines 50-80	Sets the graphic mode switches of the screen display disables the Break key, and sets display line 0 to a graphics mode 2 line
Lines 80-100	Sets the variables in the program
Lines 150 170	Sets the timer routine
Lines 200-310	Reads the joystick port, and moves the man
Lines 320-550	Moves the money spiders around by locating what is above, below left and right
Lines 560-580	Prints the second man with shorter legs to give the impression of animation Enters a loop to alter time of each level
Lines 590 860	Draws the screen display which is made up of redefined characters
Lines 890 930	Reduces the time by one
Lines 950-970	Executes a gosub depending on the values held in the variable Q
Lines 980-1040	Increments the score by 10 when a money bag is taken Also checks to see if the variable limit is below one and if it is, prints the out sign
Lines 1060 1260	Designs the new level, multiplies the remaining time by 100 and adds it to the score
Lines 1280-1370	Reduces the remaining lives variable by one produces the sound and colour effect when spider kills you

Constructing a machine code device driver

Part 5 of Andre Willey's series on the Atari's input/output facilities

BEFORE starting on this month's topic – customising the operating system to your own requirements – let's first answer the question I left you with in the April issue of *Atari User*. Why should it take so much longer to send 1000 bytes of data when using the PUT command than it does with the Binary Put routine we gave you?

Well, the reason is not all that hard to work out if you think about how the OS actually works when you give it a task. Each time you access it to send some data it first needs to take care of a lot of internal calculations, such as working out the handler addresses and moving the Input/Output Control Block.

Even at machine code speed this takes a little time and while you won't notice it when you call a routine once you will start to see the effect if you call the OS 1000 times – and this is why the extra delay occurs.

So far we've looked at the way that the operating system carries out your commands, but let's now examine the potential for expansion that it gives us.

As you know, the OS has a number of internal device drivers – such as those for the cassette, printer and screen – available from the moment you switch on the machine. In addition, there are a number of extra peripherals you can add to your Atari – each of which needs to add its own handler to the existing set.

These include the disc operating system and the RS232 interface routines, both of which are capable of loading – or booting – their own handler routines as required. This facility gives us a very neat way to add our own routines to the OS, or indeed to customise the existing ones.

Program I is a simple machine code device driver. It is not designed to do anything especially useful, but it does demonstrate the basic principles required when constructing a new device handler.

In fact, all each of the six commands does is to change the screen colour so that you can see it has worked. The rest of the program is perfectly valid for any driver, so you could insert your own routines quite easily by replacing the colour changing instructions such as those at lines 540 to 560.

If you think back to the first part of this series you will recall that the OS uses a table of device names and handler addresses known as HATABS (at address $31A) to keep track of the currently available drivers.

This table, shown in Figure I, consists of a single Ascii byte for the handler name – C, P, D, S and so on – plus a two byte number. This is the address of a further table which gives the actual memory locations of the various Open, Close, Put, Get and other data handling routines.

If we want to patch our own driver into the OS we must first look for a free space in HATABS. Since each three byte entry starts with an Ascii character, we can check every third byte to find the names used by the OS so far. As soon as we find a zero entry we know that we have come to the end of the used portion of the table, so we can insert our own handler's name and address there. Lines 250 to 400 do this, adding the name X to the current HATABS list.

In fact, the OS always starts searching from the end of the table, so you could even add a device name that already exists and the new version would then be used instead of the original one.

The two byte address should point to a 15 byte table (lines 150 to 210) within your machine code which contains six addresses – or vectors – and a jump instruction. These addresses will point to the six major routines that the OS can access – Open, Close, Get, Put, Status and Special.

In fact, due to the internal workings of the OS, the addresses given in your table should be one byte lower than the actual location of the machine code routine. The jump instruction is a simple JMP INIT which will only be used to initialise the handler, and often does nothing more than return with an RTS, as in our example.

When you access your device, the OS checks the ICCOM command byte to decide which of the six routines to use. Open, Close and Status (3, 12 and 13) are obvious, as are the various Put and Get commands (5, 7, 9 and 11), but what about the Special commands such as fill and rename file?

Well, if the OS finds an ICCOM command number greater than the normal maximum of 13 it will use the Special vector at the end of the table and your driver should check to see whether it can handle the command number requested. By the time your routines take control, the IOCB information will have been transferred into the Zero Page ICOB (ZIOCB) at $20.

This means that you never need to

HATABS + 0	P	$E430 (58416)

N.B. Assumes Dos 2.5 present.
Unused entries are filled with zeros.

Figure I – The Handler Address Table (HATABS) at $31A (794)

worry which channel number the calling program is using – all the information you require will always be located in the ZIOCB

The ICCOM command byte will thus always be found at $22 (three bytes into the ZIOCB) In our example, lines 890 to 930 check whether this value is 100 – the only command number that we will allow in this case Of course, you can check for any numbers you want here, thus allowing a lot of flexibility beyond the normal data in/out operations

After completing whatever tasks it needs to do your routine should place any error code into the Y register and update the ZIOCB with any changes which have occurred Normally the Y register should contain a value of 1 if no error has occurred, as in the Open, Close, Get Put and Status examples shown

In the case of the Special command any ICCOM number other than 100 should generate an error, and hence line 920 sets the Y register to 146 – the error code for Function Not Implemented – and returns

When writing new handlers you should always bear in mind that the System Reset button will wipe out any user defined drivers and replace the original rom based set Programs that need to get around this problem must trap the Reset routines by means of the CASINI or DOSINI locations

When the system boots it sets a flag called BOOT? to indicate if any special initialisation will be required when Reset is pushed If this flag is set to 1, the disc vector at DOSINI is used If it is 2, then the cassette vector CASINI will be used – and a value of 3 means that both cassette and disc software requires initialising

To avoid any complications with Dos you can always cheat the system a little and put your initialise address into CASINI and alter the BOOT? flag to 3 This will fool the OS into thinking that a cassette boot has also taken place and thus initialise your code alongside that of Dos This is done in lines 420 to 480

Normally, you would also need to adjust the LOMEM pointers to make sure that nothing overwrites your code In this case this is not necessary, because our driver is so short that it fits into page 6 which is always protected anyway

For those of you who don't have access to an assembler Program II is a Basic version of the handler It works in exactly the same way but is POKEd into page 6 and initialised via a USR command

Lines 240 to 530 provide a full demonstration of what each command does, plus the effect of using a value other than 100 in an XIO command This section may be typed in separately if you have already loaded the handler from an assembled file

● *Well that's it You may like to experiment further to find out which types of error are handled by the OS and which are handled by the device driver itself – you may be surprised by how little the OS actually does You could also have a go at LISTing, LOADing or SAVEing with the X driver and watch the screen colours change as the OS performs different tasks*

Program I The machine code driver

SOFTWARE Solutions

Your programming problems solved by ANDRE WILLEY

Shadow registers

I AM having a bit of trouble with a program I'm trying to write I have finished the main parts, and I'm now tidying up the screen displays and so on

My problem is linked to the SETCOLOR statement Before I read some data in from disc I print a message in Graphics mode 2. However, I often find that the colours I have set do not appear immediately, but often take four or five seconds to come on screen

I understand that this has something to do with shadow registers, but I'm not too sure what these are – can you help? – ***A. Pratt, Solihull, West Midlands***

● You are indeed correct in what you say and the problem is linked to these mysterious shadow colour registers

There are two types of colour register on the Atari – hardware registers, from which the screen display is generated, and software (or shadow) registers which are used by software and SETCOLOR commands

The two types are provided to prevent a problem common to many computer display systems If you change a colour value while the display is being updated on the television you will see an annoying jump on the screen This is most pronounced when you are using flashing colours

To avoid this the Atari only updates the actual hardware colour registers during the blank period between each TV frame – or the Vertical Blank period as it is known

When you do a SETCOLOR command the colour value you provide is stored in a temporary colour register – the shadow – until the next Vertical Blank comes along During this time all the shadow registers are copied into their hardware counterparts

Your problem occurs because some of these Vertical Blank tasks are temporarily suspended whenever time-critical tasks such as data transfer are taking place Thus whenever you access the disc drive within one fiftieth of a second after executing a SETCOLOR command, the colours may not appear until the disc I/O has finished

You can get round this in one of two ways Firstly you could use a simple FOR NEXT loop to delay the program until the next Vertical Blank has occurred – a loop of 50 times should be ample for this purpose Alternatively, you could POKE the hardware register directly

Each of the software registers (708 to 712) has a hardware equivalent (53270 to 53274) All you need to do is POKE the hardware register with the value held in the shadow If you have just set the colour of the 708 shadow you could use

```
POKE 53270,(COLOUR*16)+ BRIGHTNESS
```

This will ensure that the screen display shows the correct colours immediately

Are you having problems getting your programs to work? Write to Software Solutions, Atari User, Europa House, 68 Chester Road Hazel Grove Stockport.

We will answer as many as we can within the pages of *Atari User* but, unfortunately we cannot give personal replies

Square root snags

I wish to use my recently acquired 800XL to carry out various mathematical calculations However, I appear to have struck a problem with Atari Basic when attempting to work out squared numbers or roots

For example, a simple problem of determining the area of a circle of given radius is given by $A=\pi r^2$ In Basic this would be

```
10 INPUT R
20 LET A=3 14159*R 1230 PRINT R,A 40 END
```

Unfortunately this produces an error message on line 20 requiring the substitution

```
20 LET A-3 14159*(R*R)
```

This produces the required result. However, visualise the problem when dealing with R^{12}

Conversely, how does one determine a square root or cube root? In Basic R− \ A/π might be

```
R=(A/3 14159)'0 5
```

But how does one obtain this on the 800XL?

It seems quite easy to produce the ↑ symbol by pressing Escape then Control+↑ but each time I try it an error occurs

I should be extremely grateful if you could supply a solution to this problem as the local computer clubs are unable to help claiming that the Atari is only a games machine – ***Mr A P Tuite Tyn-Y Groes, Gwynedd, Wales***

● The answer to your problem is actually very simple – the character used when raising numbers to a given power is and is given by pressing Shift+→ This will allow you to use the formula

```
A=3 14159*R 2
```

You may then use fractional powers for roots or for a simple square root use

```
R=SQR(A/3 14159)
```

Because of the way computers handle real numbers you might find that the final place of decimals is often somewhat inaccurate, in which case you can round off to, say four decimal places with

```
X=INT(X*10000+0 5)/10000
```

If you omit the +0 5 you will truncate to four places instead There – now you can tell everyone what a great machine the Atari really is

The Atari 520 ST gives you the power to defeat deadly enemies, slaughter monsters and outwit cruel captors.

Gauntlet – U S Gold Enter a world of monsters mazes mystery and combat in the ultimate role playing fantasy game

Tai Pan – Ocean Voyage to 19th Century Hong Kong for action and excitement with pirates smuggling and mutiny

Metrocross – U S Gold* It takes lightning reflexes to get past the potholes obstacles and forbidden zones to reach the other side And that's just the beginning

Arkanoid – Imagine* The latest smash hit coin op game Are your reactions quick enough to handle 33 different play screens?

Star Raiders – Atari Star Raiders are the only force strong enough to hold off the Zycroids Your task is to command the Starcruiser are you up to it?

Flight Simulator II – Sublogic Take the controls of a Cessna 182 or Learjet 25G With high speed 3D graphics for take offs landings and acrobatics it's just like the real thing

But it's not all fun and games.

1st Word Plus – G S T Professional word processor featuring U K spellings and integration of graphics including 1st Mail for full control of form letters etc

Superbase Personal – Precision Software All the features of GEM combined with full relational database power Easy to set up flexible plus unique picture index facility

Fleet Street Publisher – Mirrorsoft The complete desk top publishing package Gives you page make up combining text and graphics for sophisticated professional looking documents

VIP GEM – Silica Distribution VIP Professional is an integrated spreadsheet database and graphics package GEM environment plus Lotus 1 2 3 compatibility

Mixing business with pleasure is no problem with an Atari 520 ST Not when you've got over 1 000 software titles to choose from

You'll find all the latest games and a huge range of business titles from the top business software houses And the range is growing all the time

You won't be short of power either The Atari 520 ST is twice as powerful as most business micros

So you'll be able to create spectacular colour graphics Even animate them to make your own films

If you're musically minded you can compose and play a full symphony

Or for those who'd rather write programs than music the 520 ST supports over thirty programming languages

In fact whatever you're looking for in a computer you'll find it in the Atari 520 ST

HINTS & TIPS

The Last V.8

(tape only)

IF YOU can t get past the first screen press the Break key as you load the program when the tape counter is around 187 Start the game as normal and when the background disappears move down until you reach a green strip Move slightly up and horizontally along alternately accelerating/decelerating A message should Flash – Entering Inner City – and you then go on to the next screen

If you don't manage it the first time don t give up There is a knack to it – *S P Kershaw, Huddersfield*

One on One

THERE is a mistake in the inlay It says press 1 or 0 for a time out This is not so and it is in fact B for Bird and J for Dr J – *C E Smith Welling Kent*

International Karate

IF YOU hold down X and a number between one and four you can change the speed Four is slowest and one fastest – *Gary Bowman York*

Polar Pierre

(disc only)

IF you have started a game with one player only and wish to change to two (or vice versa) press Option to go to the construction kit Remove all discs from the drive and select play on the screen menu The game should then return you to the title screen where Select should do the trick – *Paul Collins, Lewes, Sussex*

Mediator

First pass the skeletal horse by going down as far as possible then running up until you are one pixel or so above the bridge When the horse stops run quickly across the bridge and he should follow

You must now cross the lake by doing a 3D version of Frogger, going from turtle to log and so on When you land on the island at the centre, the Maniac waving his arms about should disintegrate

You must now climb the trees and pick the apples, descend and press the fire button to throw them at the horse The longer the button is pressed the steeper the angle of the throw After three hits, the horse should wade through the lake and carry you off

While you are on this screen, if you are called up to fight the enemy, you will find that you have been awarded a forward-firing missile for your endeavour Just push forward to fire it

The next screen is nasty because aliens come pouring down from the mountain while you beat frantically on a xylophone in the hope that they'll explode

Just when I think I've got somewhere that lousy bird flies past, steals my hammer and leaves me well and truly in the lurch Can anyone help? All I do know is that if you press up on this screen, left and right will steer your missile (from last screen) accordingly

At this rate, all I can say is your ship on screen eight must be a real mean war-machine with the amount of extra weaponry it's receiving – *Paul Collins, Lewes, Sussex*

Spindizzy

WHEN you travel along thin pathways that are just hanging in the air change to the form of a gyroscope Then your craft will only fall off if the tiny point that the whole thing is balanced on wanders too near the edge It gives you more room for error – *Paul Collins, Lewes, Sussex*

Spy vs Spy II: The Island Caper

YOU can drop missile parts just behind foreground trees so that only a pixel or so is visible In the two player game your opponent tends to miss them especially if you bury lots of objects around the area to distract him – *Paul Collins Lewes Sussex*

Aztec

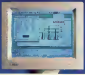
TO OBTAIN infinite dynamite, collect seven sticks then crawl to the end of a ledge with your hand over the edge Drop the sticks quickly on each other and they will stay in mid air The dynamite indicator will become a mass of weird symbols but you will have infinite dynamite – *C E Smith, Welling, Kent*

Zorro

HERE is the full solution but you will have to work out [illegible] for yourself

- Collect the brand, heat it at the forge and brand the ox. You can collect the key that was next to it
- Collect the mission bells from the hotel and put them at the top of the church with the grave in The grave will open, but do not enter yet
- Collect the trumpet from the hotel, stand on the see-saw and press fire. A guard will emerge and fall on to the see saw catapulting you into the [illegible] Move along the pole, go up and collect the boot
- Collect the hanky (if you haven't already) then go down the well and take the goblet in the cellar
- Now enter the grave and collect the bags of money When you are in the room with the flashing icons, go high to the far left and push the barrels in the cellar
- Go back to the hotel and collect the flowers
- Re-enter the tomb by the cellar and go up to the jail.
- Free the prisoners while avoiding the bullets The prisoners will form a platform to jump on to the low roof Enter the next room and then work your way across it
- On entering the room with the senorita at the top, work your way to the top When you reach her, the hanky and flowers will be given to her automatically She will kiss you and music will play You have completed Zorro – *C E Smith, Welling, Kent*

To help you destroy the aliens



and defeat the taxman,

we've massacred the price.

For a limited period, the Atari 520 STM is even more of a knockout than usual

We're offering it for just £449.95 (inc VAT) complete with SF354 disk drive, SM125 mono monitor,* a mouse worth £24.95 and 1st Word, worth £49.95

So as well as saving you from the enemy, the 520 STM will also save you £184

You'd better hurry though, because it won't be long before our stocks are wiped out.

ATARI 520 STM
WORKS HARD PLAYS HARD

[illegible]

Sound sampling and playing Midi music

IAN WAUGH reviews three packages devoted to tuneful fun

THE Atari XL is hardly blessed with a proliferation of music add ons so it is encouraging to see 2 Bit Systems devote its energy to righting this wrong. It already has three music packages for the 48k Atari and more are on the way.

We're looking at three of them this month – Midi Master, Replay and Digidrum/Synth. The first contains six programs – an eight track Midi sequencer, CZ voice editor, DX100/21 voice editor, CZ keyboard split utility and two programs which will play, via Midi, music created with the Music Composer and the Advanced Music System.

You get an interface too, which plugs into one of the disc drive's I/O ports. It even has six feet of wire attached with Midi DIN plugs on the end so you can connect it straight into your synth. The plugs are marked in pen with an I and an O but these soon rub off, so it's a good idea to tape on a couple of labels.

The trade-off for all these programs is a general lack of facilities, but you do get lots to play with.

The sequencer is controlled from one screen and operation is a piece of pie. You can record on up to eight tracks but each is monophonic, which means it can only record one note at a time.

The tracks are listed down the left side of the screen with seven parameters across the top: REC, PLY, PGM, TRP, REP, LEAD and GAP.

You alter parameters by moving the cursor on to them and typing in new values. Thankfully you don't have to hold down Control to operate the cursor keys – nice one 2 Bit.

REC selects the record channel, PLY selects the play channel, PGM sets a Midi patch or program number which is transmitted to the synth before the music starts and TRP transposes the track over plus or minus 99 semitones.

REP will cause a track to repeat a certain number of times, LEAD lets you delay the start of a track and, finally, GAP will produce a delay before the track repeats.

You can save and load a piece of music, wipe a track and play and record. There is also a time input option which lets you tap out the rhythm of a recorded track. This is the nearest you get to step-time input as all tracks must be recorded in real-time – but see the Music Player programs.

Let's say straight off that what the sequencer program does it does well but a comparison (however odious that may be) with almost any other piece of Midi software finds it lacking in the facilities department.

For example, one of the main attractions of Midi sequencing is the ability to record a piece slowly and speed it up on playback, but Midi Master can't do this (although you can set the metronome speed to help you keep time as you record).

Other features which you might expect to find are also missing. There are no editing or copying facilities and it doesn't record velocity or pitch-bend information.

The program doesn't send a Notes Off message when you stop playback and notes on your synthesiser will drone on until you reset it. It doesn't transmit Midi sync messages, so controlling a drum machine could be awkward.

I'd love to be able to catalogue the disc, too.

Okay, that's a pretty big list, but there is good news. Apart from being easy to use the program works a treat with Casio CZ synths.

The CZ series are multitimbral instruments, which means they can sound more than one tone at the same time under computer control. It's a doddle to record four parts and by altering the PGM parameter you can experiment with different sounds on playback.

Another bonus for Casio CZ owners is the CZ voice editor. This shows all the synth's parameters on screen at once and you alter them by moving the cursor and typing in new values. It has no frills and can only handle one sound at a time.

If you have a CZ230 this is perfect as it lets you edit the otherwise inaccessible four programmable voices. A CZ menu program lets you instantly load any of the voices on disc.

A new addition to the disc is the CZ split facility which lets you play one sound on the lower end of the keyboard and a different one on the upper end.

The DX100/21 editor performs a similar service on these Yamaha synths and it can even dump a complete bank, although the synths have faster built in tape dumps.

The two final programs let you load in and play music produced with the Music Composer cartridge and the Advanced Music System. The manual admits there are limitations because of the way the programs handle music data but they can still produce excellent results.

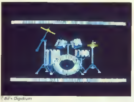
The most amazing part of Midi Master is the price. Even though it may be short on features in a few areas, if you want to make music with Midi and your Atari – and especially if you have a CZ synth – you really cannot afford to be without this package. It is terrific value for money, and if you have a CZ230 it is a must.

Replay is something different – a sound sampling system. The necessary circuitry is housed in a cartridge which plugs into the cartridge port, and there are five programs on the support disc.

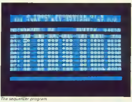
A 15 inch flying lead ending in a mini jack plug runs from the cartridge and plugs into a sound source such as a tape recorder or hi fi, for sampling purposes. I wish this lead had been a bit longer.

The sampled sound is played back through your TV or monitor speaker and the sound quality suffers accordingly. An audio-out socket would have been nice and would have made the recording of your Replay experiments easier and cleaner.

The main program is called Replay and this lets you sample and playback a sound. You can select six sampling rates – 6KHz, 8KHz, 10KHz, 12KHz



Bit's Digidrum



The sequencer program

16KHz and 21KHz – which give you between three and 12 seconds sampling time.

The waveform of the sample is shown on screen and you can position start and end markers to select the section you want to hear.

You can load and save samples between these markers, and catalogue the disc. By loading a number of samples and moving the markers each time you can build up a series of sounds one after the other. You can produce some good – and weird – effects like this.

Apart from chopping bits off a sample, you can't do much else to edit it, although there is a reverse option which lets you play the sound backwards. Always great fun, this one.

A calibration meter on screen helps you select the optimum playback level for your tape recorder. There is also an auto trigger function which will trigger the sampler as soon as the sound source reaches a threshold level.

The sampling resolution is eight bits, with a playback resolution of four bits. This means it's not the best quality but it should be acceptable – and that sums it up nicely considering the sound plays back through the TV speaker.

Careful positioning of the start and end point markers can often get rid of unwanted noise, and good recording procedure is very important too.

You have to set the output and recording levels carefully to get the best results.

The User program allows you to use samples in your own Basic routines. What makes this especially useful is that you don't need the cartridge to play them back, so you can give copies of your programs to your friends. Imagine your program saying, "Now press Fire!" – or whatever other words your mind can conjure up. The sample does occupy memory of course – but not so much that you couldn't write some interesting programs.

Digidrum converts your Atari into a software-based drum machine which uses drum samples taken with Replay at a sample rate of 10KHz. You can program up to 29 patterns of up to 28 steps and chain them into a song.

A song consists of up to 32 steps, each step consisting of a pattern number and the number of times it is to be repeated. This construction is similar to the method used by many dedicated drum machines.

Options are accessed from pull-down menus and you select the pattern (to be edited), then edit mode followed by play, which is a bit fussy. It would be nice if you could hear the pattern and select patterns from the edit screen.

You can't load in new samples in place of the existing drum sounds, which would have been terrific, but perhaps that's asking a bit much. (Watch out for 2 Bit's Percussion Master which lets you do just that!)

Available sounds include bass drum, snare, mid tom, low tom, cowbell, hand clap and open and closed hi hats. You can only play two drums at once, and certain combinations can't sound at the same time (such as the hi hats and the cowbell) but you can produce some pretty good results with a little thought and careful programming.

Digisynth, as you may guess from the name, does for sequencers what Digidrum does for drums. You can load new voices into Digisynth and use them to play a sequence of up to 256 notes within a single octave range.

Now you can program a dog barking, "How Much is that Doggy in the Window – Woof! Woof!" – something I've always wanted to do since seeing it on a Tomorrow's World programme.

The pitch only ranges from C up to B. That missing C at the top is rather restricting – as indeed is the one octave limitation – but you can enter and play back simple tunes quite effectively. It is interesting to hear how the character of a tune can alter when played with different sounds.

New to the package is Echo, which can produce a delay ranging from 2/100ths of a second to 1.3 seconds. It can do some rather funny things to recorded music, and it will work on your speech too, although you will probably need an adapter of some sort to go between the mini jack on Replay and a microphone.

Although all the programs are simple you can have a lot of fun with them. A bit more scope and a few more features would be nice but, as with Midi Master, you get a lot of programs in the package.

The significantly more powerful features and intricate hardware required to run the system is reflected in the higher price of Replay. It hardly costs an arm and a leg as sampling systems go, but if you want to make extensive use of it in recording you may find it lacks facilities you really need.

The good news is that the Digidrum and Digisynth programs are available together for the ridiculous sum of £4.95. This is a prime example of software being cheap even if it were twice the price. Buy these if you buy nothing else!

2 Bit is currently working on an enhanced version of Midi Master which will include a 16 track polyphonic sequencer and a score writer. Now that will be something.

Products: Midi Master £27.50. Replay £39.95. Digidrum/Synth twinpack £4.95.
Supplier: 2 Bit Systems, 44 Morcom Road, Dunstable, Beds LU5 4EG.

ACE – the final frontier

STEPHEN WILLIAMSON closes his series with the last two modules of his advanced character editor

PART three, the final section of the ACE character set editor program, adds the Pad and Animation modules It will not run on its own, but must be merged with Parts one and two that appeared in *Atari User* in April and May

Once you have typed in Part three, list it to tape using the LIST C command or to disc with LIST D ACE3'

With Part three in memory enter the combined Parts one and two from last month by using ENTER C or ENTER D ACE1AND2 and you will have the complete version of ACE which can then be saved to tape or disc using the command SAVE' C or SAVE 'D ACE

The extra commands now available are as follows

PAD(P) Used to create multi character graphics It is also used to design animation frames used during the Animation section

To enter Pad press P There are further commands associated with Pad and these are listed on the right hand side of the menu display Like the main commands they are accessed by pressing a single key When returning from a Pad command, ACE will redisplay the Pad menu To exit from the Pad menu and return to the main menu press Escape

ATASCII(A) Affects all characters on the Pad display

When this function is on all characters will be displayed as standard Atari characters Pressing A again returns the Pad display to the redefined shapes This helps you keep track of what shape has been assigned to which character

When leaving Pad mode the selected character set (Atari or redefined set) remains on the Pad display

MODE(M9) The bottom section of the screen display is the Pad design section When ACE is first run all characters printed to the Pad display will be in Graphics 0 To change to a Graphics 1 or 2 screen press M and select the mode required

PRINT(P) When the Print option is accessed a rectangular flashing cursor will appear on the Pad display Any character key that you press will be printed to the Pad screen at the current cursor position The cursor is moved around the screen by means of a joystick

In Graphics 0 do not use any non-character keys such as Delete Tab or Insert You should also avoid using the * key as it is used to make up the cursor square

In Graphics 0 use the Caps and Inverse keys to select uppercase lowercase and inverse characters In Graphics 1 and 2 these keys are used to select a colour from the palette of four foreground colours Because of this only 64 characters are available in modes 1 and 2 – uppercase letters, numbers and symbols (screen codes 0 to 63) Screen codes 64 to 127 – lowercase and Control+key graphic symbols – are not available

For Graphics 1 and 2 characters the four colours are selected by means of the Caps and Inverse video keys

Caps on/Inverse off	Colour 1
Caps off/Inverse off	Colour 2
Caps on/Inverse on	Colour 3
Caps off/Inverse on	Colour 4

This is true for the 26 letters of the alphabet but numbers and symbols act differently – refer to the discussion of the Basic COLOR statement in *Your Atari Computer* for more information

Because the Escape key is accepted as a valid character in Graphics 1 and 2 it cannot be used to exit from the Print option Instead press the Start function key to return to the Pad menu – then press Escape if you want to return from Pad to the main menu

WIPE(W) To erase the Pad display press W – this operation takes a few seconds

Wipe fills all the current Pad display with spaces It is possible to edit the space character just like any other during the Edit option, but in normal circumstances this is not recommended unless you deliberately want to create a textured background

One interesting aspect of editing the space character is to create artifacting effects which take advantage of how your television handles colour information Try editing the space character so that it resembles a chess board with alternate pixels plotted

On a Graphics 1 or 2 Pad display print large blocks of space character using different colours As if by magic more colours will appear Switch to graphics 0 and what is normally a two colour mode (foreground and background) has acquired other colours This effect is more dramatic with some colours than others – try experimenting with this effect using the Colour option

SCREEN CHANGE(1-9) ACE has the facility to hold up to nine seperate Pad displays in memory for use in the Animation mode or for storing graphic designs To switch from one screen to another press keys 1 to 9 from the Pad mode When in the *Print/Pad* mode, use the Option key to go up a screen and the Select key to go down

When saving Pad screens you will be prompted to specify how many screens to save As well as saving the data ACE also saves the colour registers so that, when loading screens from cassette or disc the colour registers will be changed back to the saved values

ANIMATION(A) The animation facility displays a quick succession of Pad screens to create graphic movies

This mode is entered by pressing key A from the main menu A Pad screen (1 to 9) may be allocated for each frame of the animation

Press Escape after entering the screen number of the final frame in your animation sequences – these need not be the maximum nine frames The frames will then be display in quick succession

Animation speed is preset to 1 (fast) To change speed move the joystick down(slower) or up(faster) The animation sequence will stop while the speed is being adjusted Press the fire button to return to animation To stop animation and return to the main menu press Escape

The animation effect is handled by a Basic subroutine and achieves high speed smooth animation without

using machine code. The data from each Pad screen is stored in a separate area of ram.

The screen display list is customised so that the operating system points to the area of ram where the first Pad screen is located. By swiftly updating this pointer in the display list using a technique known as page flipping, an animation effect is achieved. Lines 6210 to 6830 of ACE organise this operation.

In conjunction with Animation, Pad can be used to design the movements of arcade game characters such as aliens or walking men. In some applications Player/Missile graphics are useful for arcade game animation – but often redefined characters are better for the job and are much easier to control.

Many commercial arcade games, such as Gauntlet, use redefined characters and you should quickly find that ACE will become an invaluable part of your graphics program library.

Set up your own closed user group on

MicroLink

MicroLink is ideal for transferring instant information between groups of people – between branches of a company, members of a club or just friends with like-minded interests.

Whether there are five or 500 people in the group, they can all be sent the same information in one operation ... instantly.

And each recipient can immediately send a reply, or his own comments, to every other member of the group.

Head offices of companies use MicroLink to send daily memos to their regional offices. Chains of shops use MicroLink to receive daily trading reports from their branches.

It's cheap, reliable – and it's 100 per cent secure, because information sent via MicroLink can only be seen by the person for whom it is intended.

Details from 061-456 8383.

MicroLink electronic mail and much, much more!

Check up on the taxman

Ernie Little's program might just get you that income tax rebate . . .

PAYING income tax is no fun at the best of times, but at least with this program you can anticipate how much cash will be left in your pocket next pay day

Before working out the calculation it needs to know what your tax code is which tax period your next pay day will be in how much you ve earned how much tax you ve paid on those earnings and how much you expect your next pay to be before any deductions

Your tax code is issued by the local tax office and is in the form 233L. The actual number can be almost anything but 233 is normal for single people or married women and 369 for married men or others who are claiming a married man s allowance (for instance a single parent)

The letter following the number would normally be L as shown, H or T None of these letters affects the way in which tax is calculated Certain other letters however may affect calculation and are outside the scope of this program

National Insurance calculations in the program are based on a person who pays NI contributions under weekly table A This will cover all working men and single women who are not classed as self-employed any working married women who are not entitled to be on B rate and is not self employed and in all cases not contracted out of the State pension scheme and under the current legal retirement age

The way this program calculates your income tax is to start with your tax code A tax code of 233 means that you may earn up to £2335 a year before you need to pay tax at all This is just under £45 a week A married man with a tax code of 369 can earn £3695 a year just under £72 a week without incurring tax liability

The amount of tax-free pay which you are entitled to for week X is calculated and this figure is deducted from the total wages earned for the current tax year, up to and including the week in which you will receive the amount entered in the input routine

If your total taxable earnings in any one tax year are less than £17 100 you will be taxed at the rate of 27 per cent If you exceed that figure you will have to pay tax at 40 per cent on all taxable pay earned between £17,100 and £20,100

The rate then increases to 45 per cent for the next £3 000 spread There are other bands up to 65 per cent and the program caters for these too

National Insurance is calculated differently In this case there is a base line and a ceiling Any earnings below this line currently £39 a week attract no contributions up to the maximum amount payable of £25 80 a week irrespective of the amount earned

For all points in between the amount due depends on the gross pay for that week From the base line to £70 the figure is 5 per cent, from £70 01 to the ceiling it is 9 per cent

Unlike income tax calculations amounts earned during the year have no effect If you earn £20 one week and £100 the next, you will pay no NI contribution for the first week and £9 for the second

Once the tax and NI has been calculated nett pay is found by subtracting these two amounts from your gross pay

This program draws a bar chart and shows the figures for Tax NI due and nett pay both as money and as a percentage of your total earning that week

If you have entered the information incorrectly or you are due a rebate the bars may exceed the limit of the screen This should not be a problem and will leave you secure in the knowledge that you are due a nice fat tax rebate

Lightwave QUALITY TESTED CABLES & ACCESSORIES

SPECIAL ½ PRICE OFFER

CENTRONICS PRINTER CABLE AND SOFTWARE

JOYPRINT is a Centronics [illegible] for the ATARI [illegible] 1 ... Computers. The [illegible] cable which plugs into the printer and the joystick ports on the computer and a tape which contains the software which is compatible with BASIC, ATARIWRITER and the ASSEMBLER EDITOR Cartridges. JOYPRINT will work with most printers but has special features for use with EPSON (or EPSON compatible) printers. Print outs can be [illegible] in a variety of character styles including the ATARI character set and high resolution screen displays can be printed out.

Supplied in a presentation library case with full instructions

Putting on an art show

MICHAEL BAXTER shows how to give a professional look to your picture display

ONE of the few things Atari left out of its touch tablet graphics package was an artshow program, similar to that included in paint This allows you to display your creations one after the other – in a specified order – automatically

With this in mind, I wrote this picture handling utility

When the program is run you are presented with six options

Enter picture display order Lists all the picture files you have on the disc They must have the extension PIC to be listed and be in compacted form as this program will not operate with the 62 sector micropainter files To enter the picture order use the cursor keys to move up and down the columns Press Return when you wish to include a picture and the display number will appear on the right of the filename When finished press Escape to return to the main menu

Set up colour scroll values Replaces the rainbow colour option on the Atari Artist cartridge and is much more flexible in its use It allows control over direction and speed of the colour scroll There is also a random setting which creates interesting effects The default setting is fast scroll up

Picture disintegrate toggle Disintegrates the displayed picture before the next is loaded in when the option is turned on If it is off the picture will just blank out before the next one is loaded

Next picture by delay/keypress Loads the pictures automatically with a selected time delay if toggled on Otherwise, you press a key to start each picture loading

Start art show Allows you to start the art show if you have entered the display order If you have opted for a time delay then enter how long in seconds you wish the picture to remain on screen You will then be asked if you want to see the picture loading Enter Y or N or press Return if you want to use the displayed default setting Pictures will then load

When a picture is being displayed, press keys 0, 1, 2 and 4 to use the colour scroll facility – you cannot use this if you are using a time delay Press any other key to load the next picture

Leave program Returns you to Basic

PROGRAM BREAKDOWN

10-20	Variables
5000 5220	Poke in machine code and data tables
7000 7085	Main options page
7100 7163	Reads picture filenames' displays them and allows you to input picture order
7200-7250	Set up colour scroll values
7300-7301	Auto disintegrate toggle
7350	Clear screen routine
7360	Leave program
7400-7401	Determines whether time delay or keypress is to be used
7500-7592	Loads pictures, handles colour scroll and disintegrate routines

MAIN VARIABLES

N-N10	Numbers 0 10
SLD	Location of machine code
BYTES	Number of bytes to poke into SLD
P6	Page 6 (1536)
RAN	Random colour scroll flag
AUTO	Auto disintegrate flag
NPIC	Load next picture after time delay or key press flag
F$	List of picture files to be loaded
T$	Temporary string
COL(4)	Color register data
W	Width of colour bands
S	Speed of colour scroll

Sounds exciting, but unfortunately...

IN Bob Chappel's review of Trivial Pursuit in the February edition of Atari User he states "All you have to do is speak it aloud – there's no typing or selection of multiple answers"

I would like to know how the computer receives its voice input, what it uses for a microphone and whether it requires a voice print demonstration at the start so that it can understand your statements

I don't know much about that side of the computer world, but if you don't need extra hardware for this maybe someone could write a routine to let the computer monitor your voice print in the way the review says this game does

Of course I may have got the wrong end of the stick, in which case could you inform me of the true meaning of this statement

Also, could you tell me if there is an 8 bit version of the Star Trek game you reviewed in Atari ST User *last month*

– K Swinton, Scunthorpe, South Humberside

● When Bob Chappel reviewed Trivial Pursuit in the February issue of *Atari User* he did say that all you have to do is speak aloud, but this was not meant to be taken too literally

The computer as it stands, has no ability to interprete speech patterns and when you play Trivial Pursuit you tell the other players of your True/False or Yes/No answer to the question

The game works this way on a truth basis, depending on your typed input

There is an old version of Star Trek about for the Atari 8 bit machines but it is far cry from the one out for the ST If a version comparable with the ST one ever comes out for the 8 bit we will certainly review it

Missing switch box

I BOUGHT my Atari 130XE five months ago from Athens but I have not found the TV switch box which the manual makes reference to

– Sabri Ghasholit, Tripoli, Libya

● The box referred to is only recommended for you to use, but you can manage fine without it All it does is allow you to switch from the TV to computer without unplugging your aerial – and you do not actually get one when you buy the computer

Costly error

I HAVE recently typed in Illuminations from the November issue of Atari User *I saved the program and checked it using Get It Right and I found some mistakes But when I tried to load the program to correct them, Error 21 came up*

This has also happened with another program Please could you tell me what is going wrong **– Evan Proudfoot, Ratho Station, Midlothian**

● Unfortunately Error 21 indicates that your file did not save correctly to tape so unless you made more than one copy we're afraid you will have to type the Illuminations program in again A useful tip for the future is to ensure that you save your work several times It may be that the tape you were using was of poor quality or that your tape heads may need cleaning

Search for cartridges

I OWN an Atari 800XL with Data recorder joystick and 100 games and I am looking for some cartridges, but can't find any

Is the hole on the top for decoration? Can you use the old 2600vcs cartridges on an 800XL?

Also is Beach Head available on cassette for my 800XL If so where could I buy and for how much? **– M Lee, Bingley, West Yorkshire**

● A lot of software was changed to fit in the cartridge slot However your 2600 cartridges will not plug in and even if they did you would damage your computer

Available cartridges include Galaxians Gorf and Missile Command

Beach Head is not available on tape as the program refers back to disc all the time

REPLACING A KEY

I HAVE a 1010 tape recorder which I use regularly but recently the Record button broke in half I know several people who have had this problem

Could you please tell me of a company which sells separate keys, because it seems such a waste to buy a new tape recorder **– Colin Bryson, Kilmarnock, Scotland**

● Your letter shows a standard fault with the 1010 tape deck The keys have a tendency to snap after a lot of use The usual keys that break are Play and Record

We don't know where you can get new keys but you have a Pause key that has little if any use So you can swap it with the broken one

To do this you unscrew the base of the tape deck and pull the front off very carefully as two plastic lugs secure it

You will see a grey coloured plug on the circuit board Unplug it and you now have an unrestricted view of the keys which are held in place by a metal bar and circlip

Remove the circlip pull the bar through and pull the keys upwards Remove your Pause key and the broken key and swop them over, remembering to replace the small metal spring behind the keys

Refit everything and your tape recorder will be working again We recommend you only do this job if your deck is out of warranty, otherwise take it back to where you bought it

Cable conundrum

I HAVE just had to shorten the cable on my Atari Touch Tablet but now have the problem of which coloured

→

wire from inside the cable goes to which pin in the joystick socket in my 800XL I would be grateful if you could print the solution – **D Chatwin, Solihull, West Midlands**

● It is recommended that when disconnecting any wires you always keep a record on paper of where all the wires go instead of cutting them off straight away

Here are the pin numbers followed by the colour of the wires that go to the joystick plug

(1) Brown
(2) None
(3) Orange
(4) Yellow
(5) Green
(6) None
(7) Pink
(8) Grey
(9) White

Recorder troubles

We regularly have problems loading games on our 800XL Nearly all our games are good quality and if we go through a period where we cannot get a game to load, no other games load either

I've used a head cleaner on the 1010 recorder, but it didn't improve the situation and I have checked that all wires are not crossed and that plugs and sockets are securely connected I also ensure tapes are wound just beyond the leader before loading

When our machine does not load the loading tone heard through the TV is often much softer and seems to sound higher pitched

Loading will normally fail before the tape counter reaches 30 The screen will show Boot error or else the Atari will go into Self-check mode

Do you know the address of Atari(UK) since our guarantee card has only the US address – **Paul Heawood, Fareham, Hants**

● It could be that your tape heads are out of alignment and if this is so then we would recommend you take the deck to a dealer for adjustment We do not suggest that you undertake this action yourself due to the temperamental performance of 1010 data recorders

You say you wind tapes just beyond the leader before loading On most commercial software you should fully rewind the tape or you will get a time out error on loading because Atari has a 19 second timer before data transmission

The address of Atari (UK) is Atari House Railway Terrace, Slough, Berkshire, SL2 5BZ

Missing brackets

HAVING recently got into computing I bought an Atari 600XL expanded to 64k I have come accross two problems which I hope you can solve for me

Firstly I have been given Compute's Atari Games Collection Vol 1, and I am having problems typing in most of the programs This is caused by the fact I am unable to fathom how to input the curly bracket characters

An example of a line using these signs is as follows

```
PRINT #6,{224 Spaces}
```

I have tried using ordinary brackets but to no avail Have you any suggestions?

Secondly, when typing in lines from a program the computer sometimes seems to freeze and has to be abandoned This always happens when the Return key has been pressed and the cursor returns to the next line but will then not move any further no matter what key is pressed

I hope you or your readers can shed some light on my problems, and thanks for a really first class magazine – **R Masson, Castlemead, Bournemouth**

● It is not surprising that you are having problems as these brackets do not exist on the Atari

When the line says *"224 Spaces* it means that you open the quotes, press the space bar 224 times then close the quotes

You are not meant to enter the text merely follow what it means

In answer to your second problem, this plagues most XL machines and the old 400/800 once It has to do with your operating system and when a lot of text is edited it is possible for the Atari to get a bit confused and crash thus losing all your work

It is highly recommended that before editing a program you should always save it

Alternative languages

KEEP up the good work and may Atari User continue to improve As a relative new comer to computing although I am a very fast learner, I find that the intricacies of machine code elude me

I am fairly competent in Basic but I am becoming bored with it So I began to look for another language

Action! was my first choice, but sadly beyond my budget, so I fell back on Atari Logo I've been using it for about a week now and it's fascinating

So how about running a page as a regular feature devoted to, if not Atari Logo, then alternative languages in general with programming features reviews – in short a mini magazine? After all D Radburn says the Atari is just made for Logo!

I wonder if any other readers agree? – **R Robinson, Doncaster**

● We are discussing the

Menu Maker update

I WAS delighted when you published Menu Maker by Mark Cocker in the February issue of Atari User I have found it to be very useful and now include MENU BAS together with the AUTORUN SYS file on all my discs

There is however one problem with it I discovered it when trying to load a rather large machine code program which required Basic to be turned off

It appeared that although Basic was turned off the 8k of memory in which it resided was not available for use by other programs

This program shows a modification to the original MENU BAS program to allow this area of memory to be used

Line 600 starts a subroutine to set up the new machine code in page 6 This is initialised by a GOSUB command inserted into line 10 and executed by X = USR(1536) in line 460

This modification is well worth doing and puts the finishing touches to a very useful program

```
10 GOSUB 600:GOTO 470
460 X=USR(1536)
600 DATA 173,1,211,9,2,141,
1,211,169,192,133,106,162,
96,169,12,157,66,3,32,86,
22,8,162,96,169,3,157,66,3,
169,37
610 DATA 157,68,3,169,6,
157,69,3,169,8,157,75,3,
169,28,157,74,3,32,86,228,
76,200,21,83
620 RESTORE 600:FOR I=1 TO
56:READ A:POKE 1535+I,A
NEXT I
630 RETURN
```

– **Dr M R Holland, Merry Hill, Wolverhampton** idea of covering more languages. Contributions from readers are always welcome and would help us start such a service.

ATARI USER Mailbag

WE welcome letters from readers – about your experiences using the Atari micros, about tips you would like to pass on to other users, and about what you would like to see in future issues.

The address to write to is:

Mailbag Editor
Atari User
Europa House
68 Chester Road
Hazel Grove
Stockport SK7 5NY

The secret of line 5

I AM having problems typing in "Just like the real thing" from the April 1987 issue of Atari User. I have typed it in exactly as you printed it, but the computer always comes up with an error message at line 5.

What am I doing wrong? I own an Atari 800XL computer so has this anything to do with it?

Do I need some sort of cartridge to be able to type in this sort of program or must I first poke in some sort of code?

Typing in these listings gives me lots of enjoyment so please can you help me out of this dilemma. – **S Ellis, W Glamorgan**

● Your problem is that you are attempting to type in an assembler listing from Basic.

This will not work, as the computer cannot understand the syntax that you are entering. So you need an assembler editor cartridge or some kind of assembler language to enter this listing.

If you read the article you will see that the listing on page 16 of the same issue gives a Basic version of the program to emulate the one that you are cannot enter. Your 800XL is working fine so you have no worries on that score.

A memory problem

I HAVE recently bought an Atari 130XE and a 1010 tape recorder and I am having trouble saving programs that I have typed in.

Could you please tell me where I am going wrong – **S Miller, Middlesbrough**

● Unless you have got faulty equipment you should not be having any problems.

With a program in memory and the Ready prompt on the screen, press the Record and Play buttons at the same time on your **1010** then type CSAVE and press the Return key twice.

The program will then be saved to tape. If this does not work then you must have a problem with your tape recorder or computer. If this is the case you should contact your dealer.

No joy with the socket

I RECENTLY bought an Atari computer system and joystick. When I tried the joystick on my computer I found to my horror that it would not fit.

My joystick has a round connector on it with lots of pins inside and I cannot find a suitable socket on my Atari to put it in – **B James, London**

● It appears that you have a BBC joystick in the place of an Atari one.

There is no way that this joystick will work because apart from the fact that the sockets are different the BBC Micro uses an analogue input and the Atari digital. You need to buy a standard Atari joystick.

How to Get It Right

I OWN an Atari 130XE and I enjoy typing in the listings you publish in Atari User. But I would like to know how to use your Get It Right program.

I think it would be a good idea to publish the listing for Get It Right again for those people who missed it when you printed the listings – **Sharon Scodie, Manchester, Lancs**

● In the August 1986 issue of *Atari User* we printed a revised version of Get It Right and it is very simple to use. After you have typed in the program listing make two copies of it. A CSAVE version and an Ascii version.

The latter is obtained using the LIST"D/C command where D/C indicates a disc or cassette version.

When you have saved your program in this form simply load in your GIR program and run it.

A menu will be displayed and you just choose the first option. Then you will be asked for the filename of your program and the GIR will then load it and display a checksum of the listing.

Once this has been obtained you simply compare this to the one in the magazine making a note of any that do not match. You can then reload your program and make any changes needed.

The GIR listing and instructions also appeared in the December 1985 and March 1986 issues of *Atari User*. Unfortunately it begins to be repetitive and annoying to readers if we publish it too often.

We have plans, however, to publish a new enhanced version in the near future.

Expanding a modem

I OWN an Atari 800XL with disc drive and now wish to expand into a new area. I have decided to purchase a modem and saw a Modem 1000 advertised in a magazine with BBC cables.

Will this connect to my Atari without modification? – **Christopher Coyle, Suffolk**

● The **Modem 1000** will work on your Atari but not with the leads being offered. You will need a special one to connect from the micro's serial port to the modem and you will also need communications software.

This software is readily available. You will find the communications module of Mini Office II an ideal program to start with.

MicroLink

ALL program listings in *Atari User* are now available for free downloading on MicroLink, the UK's fastest growing electronic mail service. They join hundreds of programs already available on Britain's national on-line database.

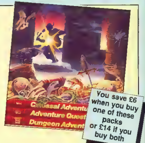
Two top adventure trilogies for you to play

Award-winning software house Level 9 has extensively re-written some of its best-selling adventures, and released them in two trilogies: Jewels of Darkness and Silicon Dreams

In the Jewels of Darkness trilogy you start with Colossal Adventure, containing all the treasures, creatures, rooms and puzzles of the mainframe original.

In Adventure Quest you must discover the Old Roads to the Dark Tower, Fortress of the Demon Lord. Only there can you defeat him. There's magic in the air in Dungeon Adventure. Can you discover the treasure while facing the perils of skeletons, carniverous jellies and orcs?



You save £6 when you buy one of these packs or £14 if you buy both

The first adventure in the Silicon Dreams trilogy is Snowball. You awake from suspended animation to find your spaceship on a collision course with Eden. In Return to Eden you must prevent the defence robots from destroying your ship. You have lost your memory in the Worm of Paradise, and you may have to join the governing party to regain it.

Each features

- Over 600 illustrations
- New language interpreter
- Huge 1,000 word vocabulary
- Multi-command sentences
- Ultra fast response times
- 64 page novel and 12 page guide

ONLY THE BRAVEST FLY....

TOMAHAWK

TOMAHAWK
NOW AVAILABLE
ON COMMODORE 64
& ATARI 600XL, 800XL,
130XE (MIN 64K)

THE DEFINITIVE HELICOPTER SIMULATION

BY D.K.MARSHALL

TOMAHAWK – a stunningly realistic flight simulation that puts you in command of an Apache Advanced Attack helicopter. Flying low over a spectacular 3D real world display with over 7000 ground features – TOMAHAWK puts you in the hot seat.

Ground attack and air-to-air interception is the challenge – day or night in the thick of the battlefield. Your combat mission is to locate and destroy enemy ground forces. It could be science fiction – it isn't – the Apache is for real – the meanest, deadliest combat helicopter ever.
You have the weapons, the machine ... climb in and prepare for take off!

- **Spectacular 3D cockpit view with over 7,000 ground features.**
- **Authentic aerobatic performance.**
- **Ground attack and air-to-air interception, with laser guided missiles, rockets and 30 mm gun.**
- **Doppler navigation and target tracking.**
- **Day/Night vision systems.**
- **Cloudy, Crosswinds, Turbulence.**
- **Pilot ratings – Trainee to Ace.**
- **Impressive sound effects.**
- **Pilots Notes.**
